[Verification and Validation in Systems Engineering](#) Mourad Debbabi, Fawzi Hassaine, Yosr Jarraya, Andrei Soeanu, Luay Alawneh, 2010-11-16 At the dawn of the 21st century and the information age communication and computing power are becoming ever increasingly available virtually pervading almost every aspect of modern socio economical interactions Consequently the potential for realizing a significantly greater number of technology mediated activities has emerged Indeed many of our modern activity fields are heavily dependant upon various underlying systems and software intensive platforms Such technologies are commonly used in everyday activities such as commuting traffic control and management mobile computing navigation mobile communication Thus the correct function of the forenamed computing systems becomes a major concern This is all the more important since in spite of the numerous updates patches and firmware revisions being constantly issued newly discovered logical bugs in a wide range of modern software platforms e.g. operating systems and

software intensive systems e.g. embedded systems are just as frequently being reported. In addition, many of today's products and services are presently being deployed in a highly competitive environment wherein a product or service is succeeding in most of the cases thanks to its quality to price ratio for a given set of features. Accordingly, a number of critical aspects have to be considered such as the ability to pack as many features as needed in a given product or service while currently maintaining high quality, reasonable price, and short time to market.

*Challenges and Innovations in Ocean In Situ Sensors* Eric Delory, Jay Pearlman, 2018-09-21. *Challenges and Innovations in Ocean In Situ Sensors: Measuring Inner Ocean Processes and Health in the Digital Age* highlights collaborations of industry and academia in identifying the key challenges and solutions related to ocean observations. A new generation of sensors is presented that addresses the need for higher reliability e.g. against biofouling, better integration on platforms in terms of size and communication, and data flow across domains in situ space etc. Several developments are showcased using a broad diversity of measuring techniques and technologies. Chapters address different sensors and approaches for measurements including applications, quality monitoring, and initiatives that will guide the need for monitoring. Integrates information across key marine and maritime sectors and supports regional policy requirements on monitoring programs. Offers tactics for enabling early detection and more effective monitoring of the marine environment and implementation of appropriate management actions. Presents new technologies driving the next generation of sensors, allowing readers to understand new capabilities for monitoring and opportunities for another generation of sensors. Includes a global vision for ocean monitoring that fosters a new perspective on the direction of ocean measurements.

*Emerging Networking in the Digital Transformation Age* Mikhailo Klymash, Andriy Luntovskyy, Mykola Beshley, Igor Melnyk, Alexander Schill, 2023-03-20. This book covers a range of leading edge topics. It is suitable for teaching specialists for advanced lectures in the domains of systems architecture and distributed platforms. Furthermore, it serves as a basis for undergraduates as well as an inspiration for interesting postgraduates looking for new challenges. It addresses a holistic view of QoS which becomes nowadays via Digital Transformations less technically and more socially driven. This includes IoT, energy efficiency, secure transactions, blockchains, and smart contracting. Under the term Emerging Networking (EmN), we cover the steadily growing diversity of smart mobile and robotic apps and unmanned scenarios. UAV EmN supports distributed intelligence across the combined mobile wireless and fixed networks in the edge to cloud continuum. The 6G driving factors and potentials in the mid term are examined. Operative emergency networking which assists rescue troops at sites also belongs to the above mentioned problems. The EmN architecture includes the components of SDN, blockchain, and AI with efficient slicing and cloud support. The design peculiarities in dynamically changing domains such as Smart Shopping, Office Home, Context Sensitive, Intelligent apps are discussed. Altogether, the provided content is technically interesting while still being rather practically oriented and therefore straightforward to understand. This book originated from the close cooperation of scientists from Germany, Ukraine, Israel, Switzerland, Slovak Republic, Poland, Czech
