Logic Gates, Circuits, Processors, Compilers and Computers Jan Friso Groote, Rolf Morel, Julien Schmaltz, Adam Watkins, 2021-08-18 This undergraduate textbook first introduces basic electronic circuitry before explaining more advanced elements such as the Arithmetic Logic Unit sequential circuits and finally microprocessors In keeping with this integrated and graduated approach the authors then explain the relationship to first assembly programming then higher level languages and finally computer organisation Authors use the Raspberry Pi and ARM microprocessors for their explanations The material has been extensively class tested at TU Eindhoven by an experienced team of lecturers and researchers This is a modern holistic treatment of well established topics valuable for undergraduate students of computer science and electronics engineering and for self study The authors use the Raspberry Pi and ARM microprocessors for their explanations

Stabilization, Safety, and Security of Distributed Systems Ajoy K. Datta, Maria Gradinariu, 2007-06-27 This book constitutes the refereed proceedings of the 8th International Symposium on Stabilization Safety and Security of Distributed Systems SSS 2006 held in Dallas TX USA in November 2006 The 36 revised full papers and 12 revised short papers presented together with the extended abstracts of 2 invited lectures address all aspects of self stabilization safety and security recovery oriented systems and programming

Optimizing HPC Applications with Intel Cluster Tools Alexander Supalov, Andrey Semin, Christopher Dahnken, Michael Klemm, 2014-10-09 Optimizing HPC Applications with Intel Cluster Tools takes the reader on a tour of the fast growing area of high performance computing and the optimization of hybrid programs These programs typically combine distributed memory and shared memory programming models and use the Message Passing Interface MPI and OpenMP for multi threading to achieve the ultimate goal of high performance at low power consumption on enterprise class workstations and compute clusters The book focuses on optimization for clusters consisting of the Intel Xeon processor but the optimization methodologies also apply to the Intel Xeon Phi coprocessor and heterogeneous clusters mixing both architectures Besides the tutorial and reference content the authors address and refute many myths and misconceptions surrounding the topic The text is augmented and enriched by descriptions of real life situations

Programming for Software Sharing D.T. Muxworthy, 2012-12-06 Most computer users are familiar with the problems of sharing software with others and the transfer of programs from one computing environment to another Software represents an ever increasing proportion of the cost of computing and these costs tend to nullify all the economic advantages flowing from the wider availability of cheap hardware Years ago it was hoped that the widespread use of high level programming languages would help in alleviating the problems of software production by increasing productivity and by making it simpler for users with similar problems to be able to use the same programs possibly on different types of machines It is a common experience that in practice this simple optimism has proved to be unfounded It was these considerations which led us in 1979 to organize a two week course on Programming for

Software Sharing at the European Community Joint Research Centre Ispra Establishment Italy forming part of the regular series of Ispra Courses With prominent invited lecturers local contributions and through discussion sessions we examined with an audience from many countries the problems involved in the sharing and transfer of software as well as suggesting ways of overcoming them In our local environment we are faced daily with three problems both from engagements in software exchange in the scientific technical field on a Europe wide or world wide basis and from work with programming techniques and contributions to the international standardization process

HPC@Green IT Ralf Gruber, Vincent Keller, 2010-03-15 Making the most efficient use of computer systems has rapidly become a leading topic of interest for the computer industry and its customers alike However the focus of these discussions is often on single isolated and specific architectural and technological improvements for power reduction and conservation while ignoring the fact that power efficiency as a ratio of performance to power consumption is equally influenced by performance improvements and architectural power reduction Furthermore efficiency can be influenced on all levels of today's system hierarchies from single cores all the way to distributed Grid environments To improve execution and power efficiency requires progress in such diverse fields as program optimization optimization of program scheduling and power reduction of idling system components for all levels of the system hierarchy Improving computer system efficiency requires improving system performance and reducing system power consumption To research and reach reasonable conclusions about system performance we need to not only understand the architectures of our computer systems and the available array of code transformations for performance optimizations but we also need to be able to express this understanding in performance models good enough to guide decisions about code optimizations for specific systems This understanding is necessary on all levels of the system hierarchy from single cores to nodes to full high performance computing HPC systems and eventually to Grid environments with multiple systems and resources
