Mathematics A Survey Course promotes the goals of a bridge course in mathematics helping to lead students from courses in the calculus sequence and other courses where they solve problems that involve mathematical calculations to theoretical upper level mathematics courses where they will have to prove theorems and grapple with mathematical abstractions The text simultaneously promotes the goals of a survey course describing the intriguing questions and insights fundamental to many diverse areas of mathematics including Logic Abstract Algebra Number Theory Real Analysis Statistics Graph Theory and Complex Analysis The main objective is to bring about a deep change in the mathematical character of students how they think and their fundamental perspectives on the world of mathematics This text promotes three major mathematical traits in a meaningful transformative way to develop an ability to communicate with precise language to use mathematically sound reasoning and to ask probing questions about mathematics In short we hope that working through A Transition to Advanced Mathematics encourages students to become mathematicians in the fullest sense of the word A Transition to Advanced Mathematics has a number of distinctive features that enable this transformational experience Embedded Questions and Reading Questions illustrate and explain fundamental concepts allowing students to test their understanding of ideas independent of the exercise sets The text has extensive diverse Exercises Sets with an average of 70 exercises at the end of section as well as almost 3 000 distinct exercises In addition every chapter includes a section that explores an application of the theoretical ideas being studied We have also interwoven embedded reflections on the history culture and philosophy of mathematics throughout the text

A Mathematician Comes of Age Steven G. Krantz, 2012-03 This book is about the concept of mathematical maturity Mathematical maturity is central to a mathematics education The goal of a mathematics education is to transform the student from someone who treats mathematical ideas empirically and intuitively to someone who treats mathematical ideas analytically and can control and manipulate them effectively Put more directly a mathematically mature person is one who can read analyze and evaluate proofs And most significantly he she is one who can create proofs For this is what modern mathematics is all about coming up with new ideas and validating them with proofs The book provides background data and analysis for understanding the concept of mathematical maturity It turns the idea of mathematical maturity from a topic for coffee room conversation to a topic for analysis and serious consideration
