Utilizing Advanced Genomics and Biochemical Tools to Strengthen Crop Adaptation for Biotic and Abiotic Stresses Gurjeet Singh, Santosh Gudi, Daa Abd El Moneim, Simardeep Kaur, 2026-02-11 Changing climatic conditions are imposing various biotic such as new pests and diseases and

abiotic such as heat drought salinity crop lodging and water logging stresses which significantly affect the production potential of major food crops throughout the world To maintain sustainable food production and feed the ever rising human population it is necessary to develop resilient crops with improved adaptation to extreme weather conditions Considering these challenges we propose organizing a Research Topic that will explore Utilizing Advanced Genomics and Biochemical Tools to Develop Climate Resilient Crops This Research Topic aims to collect articles utilizing cutting edge technologies to improve crop production under changing climates This integrated approach will enhance crop resilience and ensure more stable yields under adverse conditions High throughput sequencing and genomic mapping will be used to identify key genetic regions associated with stress tolerance By leveraging genome wide association studies GWAS quantitative trait loci QTL QTL mapping and multi omics approaches we will identify the genetic markers linked to resilience traits facilitating targeted breeding efforts Using insights gained from genomic analyses we will implement molecular breeding strategies to introduce desirable stress tolerance traits into high yielding crop varieties Techniques such as marker assisted selection MAS and CRISPR Cas9 gene editing will be employed to accelerate the development of resilient crops We will also apply metabolomics and proteomics to study biochemical changes in plants under stress conditions These approaches help in understanding the biochemical pathways involved in stress responses focusing on stress related proteins and metabolites that support the identification of biochemical markers enabling the development of interventions to bolster crop resilience By utilizing genomics and biochemical tools we can develop new resilient crop cultivars with enhanced tolerance to a range of biotic and abiotic stresses increased agricultural productivity and stability under adverse conditions thereby contributing to more resilient and sustainable agricultural systems We welcome submissions of various types of manuscripts including original research papers reviews and methods on topics including but not limited to

Plant Genotyping: From Traditional Markers to Modern Technologies, Volume II Yuri Shavrukov, Sunita Gupta, Gulmira Khassanova, 2026-01-26 This Research Topic is

part of the article collection series Plant Genotyping From Traditional Markers to Modern Technologies In contrast to the external traits of plants we cannot directly see the genotypes that comprise the underlying set of genetic material encoding these phenotypic traits To make genotypes accessible for research and further understanding various genotyping methods are used Plant genotyping began with relatively simple and elementary molecular markers like microsatellites or SSR Simple Sequence Repeats which were then followed by DNA sequencing and fragment analysis PCR and qPCR allele specific molecular probes and primers and now today s modern and advanced microchip DNA technology involving hundreds and thousands of reactions simultaneously In this Research Topic we want to focus on plant study affected by various stresses and many other aspects of plant growth and development The results of plant genotyping are important not only in advancing scientific progress but in supporting biodiversity and biosecurity the analysis of plant derived products for use in food medicine or other industries and their practical application in crop breeding Therefore plant genotyping remains one of the major important strategies for our future and that of the biosphere The goal of this Research Topic is to showcase the current status of our knowledge and progress in the genotyping of plants with various origins and conditions using available methods and technologies to target various genes of interest in any plant species This covers a wide and diverse range of areas from traditional molecular markers to modern molecular microarray technologies scientific approaches and research ideas all aimed at achieving a better understanding of and practical application of plant genotyping The scope of the Research Topic includes all manuscript types covering the following but not limited to areas Molecular marker development and use for plant genotyping Plant genotyping based on traditional molecular markers and marker assisted selection PCR based plant genotyping theoretical and practical applications Allele specific non fluorescent and FRET based genotyping and new marker development Microarray technologies for whole genome analysis in plants Plant genotyping for modern plant biology ecology food security crop breeding and other applications Please note Descriptive studies that report responses of growth yield or quality to different conditions or treatments will not be considered unless they provide novel insights into the molecular genetic or physiological understanding of these responses
