Applied Geophysics W. M. Telford,L. P. Geldart,R. E. Sheriff,1990-10-26 This is the completely revised and updated version of the popular and highly regarded textbook Applied Geophysics It describes the physical methods involved in exploration for hydrocarbons and minerals which include gravity magnetic seismic electrical electromagnetic radioactivity and well logging methods All aspects of these methods are described including basic theory field equipment techniques of data acquisition data processing and interpretation with the objective of locating commercial

deposits of minerals oil and gas and determining their extent In the fourteen years or so since the first edition of Applied Geophysics many changes have taken place in this field mainly as the result of new techniques better instrumentation and increased use of computers in the field and in the interpretation of data The authors describe these changes in considerable detail including improved methods of solving the inverse problem specialized seismic methods magnetotellurics as a practical exploration method time domain electromagnetic methods increased use of gamma ray spectrometers and improved well logging methods and interpretation

Deconvolution and Inverse Theory V. Dimri, 2013-10-22 This is the first study to present simultaneously both deconvolution and inversion two powerful tools of data analysis Featured within this volume are various geophysical convolution models and a treatment of deconvolution for a time varying signal The single channel time varying deconvolution is shown equivalent to the multichannel time invariant deconvolution thus a formalism and associated algorithms can handle both Inverse theory as well as various inversion schemes are presented on the basis of a relationship between a small perturbation to the model and its effects on the observation The information theory inversion scheme is discussed and several types of norm of minimization presented Additionally concepts and results of inverse theory are applied to design a new deconvolution operator for estimating magnetization and density distribution and the constraint of the Backus Gilbert formalism of inverse theory is used to design a new prediction error filter for maximum entropy spectral estimates Maximum likelihood another high resolution method is also presented This volume can be utilised as a graduate level text for courses in Geophysics Some chapters will be of use for graduate courses in Applied Mathematics Applied Statistics and Oceanography
