[Introductory Digital Image Processing](#) John R. Jensen, 2005 For junior graduate level courses in Remote Sensing in Geography Geology Forestry and Biology This revision of Introductory Digital Image Processing A Remote Sensing Perspective continues to focus on digital image processing of aircraft and satellite derived remotely sensed data for Earth resource management applications Extensively illustrated it explains how to extract biophysical information from

remote sensor data for almost all multidisciplinary land based environmental projects Part of the Prentice Hall Series Geographic Information Science *Digital Image Processing* Wilhelm Burger, Mark J. Burge, 2016-03-25 This revised and expanded new edition of an internationally successful classic presents an accessible introduction to the key methods in digital image processing for both practitioners and teachers Emphasis is placed on practical application presenting precise algorithmic descriptions in an unusually high level of detail while highlighting direct connections between the mathematical foundations and concrete implementation The text is supported by practical examples and carefully constructed chapter ending exercises drawn from the authors years of teaching experience including easily adaptable Java code and completely worked out examples Source code test images and additional instructor materials are also provided at an associated website *Digital Image Processing* is the definitive textbook for students researchers and professionals in search of critical analysis and modern implementations of the most important algorithms in the field and is also eminently suitable for self study

Digital Image Processing Wilhelm Burger, Mark J. Burge, 2012-01-19 Written as an introduction for undergraduate students this textbook covers the most important methods in digital image processing Formal and mathematical aspects are discussed at a fundamental level and various practical examples and exercises supplement the text The book uses the image processing environment ImageJ freely distributed by the National Institute of Health A comprehensive website supports the book and contains full source code for all examples in the book a question and answer forum slides for instructors etc *Digital Image Processing in Java* is the definitive textbook for computer science students studying image processing and digital processing [Introduction to Digital Image Processing](#) Dan Monroe, Harry Zwick, LETTERMAN ARMY INST OF RESEARCH PRESIDIO OF SAN FRANCISCO CA., 1984 Digital image processing is the manipulation of the digital representation of an image Source of the image can range from a common television video signal to complex imaging systems such as a scanning electron microscope Whatever the source of the image the basic techniques for storing and manipulating data are common to many image processing applications The actual hardware used in image processing is called a video frame grabber or frame buffer Video frame grabbers costing under 1000 are now available for many microcomputers including the IBM PC APPLE and S 100 bus systems Thus image processing is available to users where previously costs were prohibitive This document describes the image storage filtering techniques and one possible application in the biological sciences Keywords Pixels Convolution techniques Fourier filtering and Resolution Author **Remote Sensing Digital Image Analysis** John A. Richards, 2012-09-09 Remote Sensing Digital Image Analysis provides the non specialist with a treatment of the quantitative analysis of satellite and aircraft derived remotely sensed data Since the first edition of the book there have been significant developments in the algorithms used for the processing and analysis of remote sensing imagery nevertheless many of the fundamentals have substantially remained the same This new edition presents material that has retained value since those early days along with new techniques that can be incorporated into an operational framework for the analysis of remote

sensing data The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image processing in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background Each chapter covers a different aspect of the analysis of digital remotely sensed data without an excessively detailed mathematical treatment of computer based algorithms but in a manner conducive to an understanding of their capabilities and limitations Problems conclude each chapter
