

Abstract

Etherspeak certified the SureTrunk for ShoreTel connection method to enable an innovative, "native" SIP connectivity option for ShoreTel. SIP Trunking provides the ShoreTel users a carrier-aligned method for public telephone network by-pass. These connection options are enabled when a ShoreTel customer elects to use a SIP trunking provider like Etherspeak using the Session Initiation Protocol (SIP) for communications beyond the customer's IP network edge.

In the current version of Etherspeak's SureTrunk for ShoreTel offering, Etherspeak now provides the ShoreTel administrator numerous options for connectivity of the SureTrunk for ShoreTel service - to virtually any version of ShoreTel (this application note covers up to ShoreTel version 14.1).

In addition, Etherspeak now provides options for enhancing security of SIP, providing new Quality of Service (QoS) options, and Class of Service (COS) guarantees by broadening the Etherspeak solution to include cross-connections to most Tier-One carrier data networks. This evolution is an improvement to how the service may be delivered, and as a result, has enabled the ShoreTel Administrator to consider leveraging Etherspeak SIP with inter-connections to carrier networks in an unprecedented way. MPLS cross-connections are available with virtually any carrier. Please speak with Etherspeak Sales to verify the availability of connecting to your carrier's network.

This approach to SIP connectivity with ShoreTel is typically regarded as less expensive, increasingly reliable, and the key driver for reducing customer monthly recurring costs versus legacy Public Switched Telephone Network (PSTN) connections. SIP is replacing Plain-Old-Telephone-Service (POTS), Basic Rate Interface (BRI), Primary Rate Interface (PRI) or T1 / E1 trunk connections. This application note provides a guide for you in selecting and implementing an Etherspeak SureTrunk SIP connectivity option that is right for your customer. We will help you do this by providing an understanding of the three ShoreTel Certified methods to connect a ShoreGear system to Etherspeak as your internet telephony service provider (ITSP).

1. Connecting natively to Etherspeak over an single existing Internet connection
2. Connecting natively to Etherspeak over a redundant Internet connection
3. Connecting natively to Etherspeak over a private network connection

Although we maintain that providing ShoreTel customers the option for native connectivity for SIP allows for more flexibility, additional deployment options over the customer's private Wide-Area-Network, or public Internet connection have become part of our experience at Etherspeak since the first release of the service in June, 2008. This application note provides the details on connecting the ShoreTel® IP phone system natively to Etherspeak's SureTrunk SIP trunking services, connecting through an Ingate Separation, or connecting through a SIP IAD. We will detail some scenarios, thus allowing administrators to fully understand what method is best given client requirements.

Etherspeak has become an essential partner within the ShoreTel Innovation Network eco-system by providing Value-Added Resellers and end-user customers the option of leveraging SIP as a primary, secondary or tertiary connection option to PSTN network by-pass. Etherspeak supports ShoreTel versions 10 and above (please refer to previous application note). Please note that this application note is specifically addressing version 12.5 to 14.1. SureTrunk continues to provide options and innovation offers enterprises of any size access to SIP trunking, and is designed to easily connect an IP PBX platform like ShoreTel to SIP trunking to realize all of the benefits and cost savings without additional hardware, software and licensing purchases or costly installation and set-up fees.
