Body MRI Cases William E. Brant, 2013-03-21 *Body MRI Cases in Radiology* serves as a ready reference of 141 cases and nearly 900 superb quality images of common and uncommon conditions encountered in the daily practice of body MRI. The book is specifically intended for radiology residents and fellows as a study guide to broaden clinical knowledge and improve diagnostic skills when reviewing MR images of the liver biliary system pancreas urinary tract adrenal glands peritoneal cavity spleen gastrointestinal system female genital tract vascular system and heart. The selected cases provide outstanding examples of various disease states and their appearances as demonstrated by MR imaging using a variety of pulse sequences. Each case is shown on the front page with a brief clinical history and multiple carefully selected images that best show the important findings. When turning the page the imaging findings differential diagnosis and important teaching points are given in bullet point format facilitating the learning process and allowing the reader to improve interpretation and diagnostic capability in body MRI. Cases are presented in random order to mimic the diagnostic challenges that typically occur when reading the daily worklist of cases in a routine clinical body MRI practice. Readers can also review the cases by organ system through the Index of Cases found in the back of the book. *Body MRI Cases* is also an excellent companion study guide to *Essentials of Body MRI* by the same authors. Together these texts provide an excellent foundation in Body MRI. **Mayo Clinic Body MRI Case Review** Christine U. C. Lee, James F. Glockner, 2014 Using state of the art MRI images this book illustrates radiological findings in the abdomen and pelvis in a case presentation format.
