**Geographical Information Systems and Science** Paul Longley, 2005 Features a five part structure covering Foundations Principles Techniques Analysis and Management and Policy This book includes chapters on Distributed GIS Map Production Geovisualization Modeling and Managing GIS It offers coverage of such topics as GIS and the New World Order security health and well being and the greening of GIS Handbook of Computational Economics Leigh Tesfatsion, Kenneth L. Judd, 2006-05-15 The explosive growth in computational power over the past several decades offers new tools and opportunities for economists This handbook volume surveys recent research on Agent based Computational Economics ACE the computational study of economic processes modeled as dynamic systems of interacting agents Empirical referents for agents in ACE models can range from individuals or social groups with learning capabilities to physical world features with no cognitive function Topics covered include learning empirical validation network economics social dynamics financial markets innovation and technological change organizations market design automated markets and trading agents political economy social ecological systems computational laboratory development and general methodological issues Every volume contains contributions from leading researchers Each Handbook presents an accurate self contained survey of a particular topic The series provides comprehensive and accessible surveys **A Research Agenda for Geographic Information Science** Robert B. McMaster, E. Lynn Usery, 2004-08-30 A close relationship exists between GIS and numerous applications including cartography photogrammetry geodesy surveying computer and information science and statistics among others Scientists coined the term geographic information science GIScience to describe the theory behind these fields A Research Agenda for Geographic Information Modelling Land-Use Change Eric Koomen, John Stillwell, Aldrik Bakema, Henk J. Scholten, 2007-08-14 This book provides a full overview of land use change simulation modelling a wide range of applications a mix of theory and practice a synthesis of recent research progress and educational material for students and teachers This volume is an indispensable guide for anyone interested in the state of the art of land use modelling its background and its application Spatial Analysis Paul Longley, Michael Batty, 1996 Eighteen contributions demonstrate how computer methods of analysis and modelling built around GIS can be used to identify ways in which our cities and regions might be better planned and understood Arrangement is in five sections covering analysis of spatial distributions scale and generalization in geographical analysis locational modelling spatial forecasting and simulating space time in GIS Annotation copyrighted by Book News Inc Portland OR *Environment and Planning*, 2001 Journal of urban planning and design Publishes research in the application of formal methods methods models and theories to spatial problems involving the built environment and the spatial structure of cities and regions Includes the application of computers to planning and design in particular the use of shape grammars artificial intelligence and morphological methods to buildings and towns the use of multimedia and GIS in urban and regional planning and the development of ideas concerning the virtual city **Charting the Unknown** Nicholas
