Multivariate Statistics:
Wolfgang Karl Härdle, Zdenek Hlavka, 2007-07-05 There can be no question my dear Watson of the value of exercise before breakfast Sherlock Holmes in The Adventure of Black Peter The statistical analysis of multivariate data requires a variety of techniques that are entirely different from the analysis of one dimensional data The study of the joint distribution of many variables in high dimensions involves matrix techniques that are not part of standard curricula The same is true for transformations and computer intensive techniques such as projection pursuit The purpose of this book is to provide a set of exercises and solutions to help the student become familiar with the techniques necessary to analyze high dimensional data It is our belief that learning to apply multivariate statistics is like studying the elements of a criminological case To become proficient students must not simply follow a standardized procedure they must compose with creativity the parts of the puzzle in order to see the big picture We therefore refer to Sherlock Holmes and Dr Watson citations as typical descriptors of the analysis Puerile as such an exercise may seem it sharpens the faculties of observation and teaches one where to look and what to look for
