In recent years, there has been a tremendous growth of interest in plant based drugs, pharmaceuticals, perfumery products, cosmetics and aroma compounds used in food flavors and fragrances and natural colors in the world. There is a definite trend to adopt plant based products due to the cumulative derogatory effects resulting from the use of antibiotic and synthetics and except for a few cultivated crops, the availability of plant based material is mainly from the natural sources like forests and wastelands. There is a need to introduce these crops into the cropping system of the country, which, besides meeting the demands of the industry, will also help to maintain the standards on quality, potency and chemical composition.

**The Complete Book on Spices & Condiments (with Cultivation, Processing & Uses) 2nd Revised Edition** NIIR Board of Consultants & Engineers, 2006-04-01

The term spices and condiments applies to such natural plant or vegetable products and mixtures thereof used in whole or ground form mainly for imparting flavor aroma and piquancy to foods and also for seasoning of foods beverages like soups

The great mystery and beauty of spices is their use blending and ability to change and enhance the character of food

Spices and condiments have a special significance in various ways in human life because of its specific flavours taste and aroma

Spices and condiments play an important role in the national economies of several spice producing importing and exporting countries

India is one of the major spice producing and exporting countries

Most of the spices and herbs have active principles in them and development of these through pharmacological and preclinical and clinical screening would mean expansion of considerable opportunities for successful commercialization of the product

Spices can be used to create these health promoting products

The active components in the spices phthalides polyacetylenes phenolic acids flavanoids coumarines triterpenoids terols and monoterpenes are powerful tools for promoting physical and emotional wellness

India has been playing a major role in producing and exporting various perennial spices like cardamoms pepper vanilla clove nutmeg and cinnamon over a wide range of suitable climatic situations

To produce good quality spice products attention is required not only during cultivation but also at the time of harvesting processing and storing

Not as large as in the days when next to gold spices were considered most worth the risk of life and money

The trade is still extensive and the oriental demand is as large as ever

Some of the fundamentals of the book are definition of spices and condiments nomenclature or classification of spices and condiments Indian central spices and cashew nut committee origin properties and uses of spices forms functions and applications of spices trends in the world of spices yield and nutrient uptake by some spice crops grown in sodic soil tissue culture and in vitro conservation of spices in vitro responses of piper species on

*Synthesis, Epoxy Resin Adhesives and Epoxy Coatings*) Dr. H. Panda, 2016-07-08 Epoxy is a term used to denote both the basic components and the cured end products of epoxy resins as well as a colloquial name for the epoxide functional group. Epoxy resins are a class of thermoset materials used extensively in structural and specialty composite applications because they offer a unique combination of properties that are unattainable with other thermoset resins. Epoxies are monomers or prepolymers that further react with curing agents to yield high performance thermosetting plastics. They have gained wide acceptance in protecting coatings, electrical and structural applications because of their exceptional combination of properties such as toughness, adhesion, chemical resistance, and superior electrical properties. Epoxy resins are characterized by the presence of a three-membered cyclic ether group commonly referred to as an epoxy group, 1,2-epoxide or oxirane. The most widely used epoxy resins are diglycidyl ethers of bisphenol A derived from bisphenol A and epichlorohydrin. The market for epoxy resins is growing day by day. Today the total business of this product is more than 100 crores. Epoxy resins are used for about 75% of wind blades currently produced worldwide, while polyester resins account for the remaining 25%. A standard 1.5 MW megawatt wind turbine has approximately 10 tonnes of epoxy in its blades. Traditionally, the markets for epoxy resins have been driven by demand generated primarily in areas of adhesives, building and civil construction, electrical insulation, printed circuit boards, and protective coatings for consumer durables, amongst others. The major contents of the book are synthesis and characteristics of epoxy resin, manufacture of epoxy resins, epoxide curing reactions, the dynamic mechanical properties of epoxy resins, physical and chemical properties of epoxy resins, epoxy resin adhesives, epoxy resin coatings, epoxy coating, give into water, electrical and electronic applications, analysis of epoxides and epoxy resins, and the toxicology of epoxy resins. It will be a standard reference book for professionals and entrepreneurs. Those who are interested in this field can find the complete information from manufacture to final uses of epoxy resin. This presentation will be very helpful to new entrepreneurs, technocrats, research scholars, libraries, and existing units.
