Biochar For Environmental Management Science Technology And Implementation:

Biochar for Environmental Management Dr. Johannes Lehmann, Stephen Joseph, 2009 Biochar is the carbon rich product when biomass such as wood manure or crop residues is heated in a closed container with little or no available air It can be used to improve agriculture and the environment in several ways and its stability in soil and superior nutrient retention properties make it an ideal soil amendment to increase crop yields In addition to this biochar sequestration in combination with sustainable biomass production can be carbon negative and therefore used to actively remove carbon dioxide from the atmosphere with major implications for mitigation of climate change Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process This book is the first to synthesize the expanding research literature on this topic The book s interdisciplinary approach which covers engineering environmental sciences agricultural sciences economics and policy is a vital tool at this stage of biochar technology development This comprehensive overview of current knowledge will be of interest to advanced students researchers and professionals in a wide range of disciplines Provided by publisher

Biochar for Environmental Management Johannes Lehmann, Stephen Joseph, 2015-02-20 Biochar is the carbon rich product which occurs when biomass such as wood manure or crop residues is heated in a closed container with little or no available air It can be used to improve agriculture and the environment in several ways and its persistence in soil and nutrient retention properties make it an ideal soil amendment to increase crop yields In addition to this biochar sequestration in combination with sustainable biomass production can be carbon negative and therefore used to actively remove carbon dioxide from the atmosphere with potentially major implications for mitigation of climate change Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process The first edition of this book published in 2009 was the definitive work reviewing the expanding research literature on this topic Since then the rate of research activity has increased at least ten fold and biochar products are now commercially available as soil amendments This second edition includes not only substantially updated chapters but also additional chapters on environmental risk assessment on new uses of biochar in composting and potting mixes a new and controversial field of studying the effects of biochar on soil carbon cycles on traditional use with very recent discoveries that biochar was used not only in the Amazon but also in Africa and Asia on changes in water availability and soil water dynamics and on sustainability and certification The book therefore continues to represent the most comprehensive compilation of current knowledge on all aspects of biochar
