# Three Theories of the Solar System

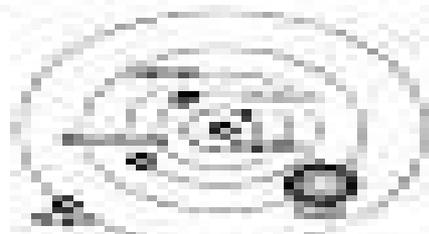

Three theories (geocentric, heliocentric, and tidal) try to describe how the solar system formed.

In the geocentric theory, the Earth is at the center of the solar system. The sun, planets, and moons orbit around it. This theory was dominant until the 16th century when Copernicus proposed the heliocentric theory.

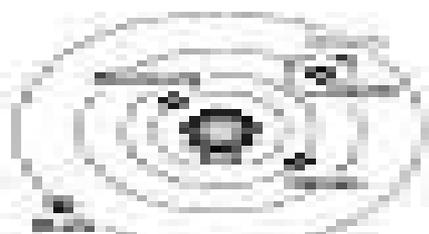

During the 17th century, Isaac Newton proposed the tidal theory. He believed that the Earth and the sun were once part of a single body that was pulled apart by the gravitational pull of the sun. The fragments of the body formed the planets and moons. This theory is now largely discredited.

Today, the most widely accepted theory is the nebular theory. It suggests that the solar system formed from a giant cloud of gas and dust. The cloud collapsed under its own gravity, forming a protostar. The protostar eventually became the sun, and the remaining gas and dust formed the planets.

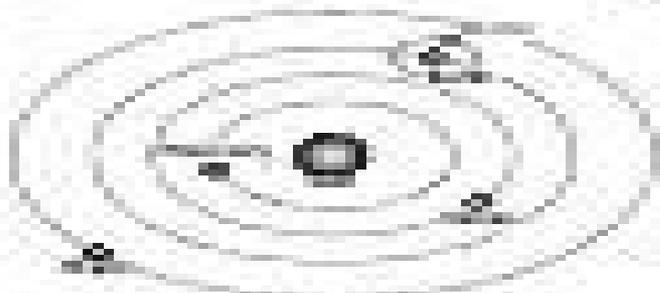

The nebular theory is supported by many lines of evidence, including the discovery of protoplanets around other stars. It also explains the composition of the planets and the formation of the solar system's structure.

Seeds,2000 Adapted from the newly revised FOUNDATIONS OF ASTRONOMY Sixth Edition THE SOLAR SYSTEM Second Edition contains the introductory and historical astronomy chapters as well as the planets chapters and the last chapter Life on Other Worlds This newly revised and updated Second Edition shows students their place in the universe not just their location but also their role as planet dwellers in an evolving universe Fascinating and engaging the book illustrates how science works and how scientists depend on evidence to test hypotheses Through a discussion of this interplay between evidence and hypothesis the book provides not just a series of facts but also a conceptual framework for understanding the logic of astronomical knowledge Fascinating and vivid the book conveys the author s love of the subject shows students how the universe can be described by a small set of physical laws and illustrates how they can comprehend their place in the universe by understanding these laws and not through memorization of facts The book s use of mathematics is incorporated into the body of the text as well as in separate sections for easy reference but the arguments of the text do not depend on mathematical reasoning allowing math averse students to easily follow the story      *Physics, the Human Adventure* Gerald James Holton,Stephen G. Saridakis,Ruth Lazkoz,Vincenzo Salzano,Paulo Vargas Moniz,Salvatore Capozziello,Jose Beltrán Jiménez,Mariafelicia De Laurentis,Gonzalo J. Olmo,2021-12-10 With a focus on modified gravity this book presents a review of the recent developments in the fields of gravity and cosmology presenting the state of the art high lighting the open problems and outlining the directions of future research General Relativity and the CDM framework are currently the standard lore and constitute the concordance paradigm of cosmology Nevertheless long standing open theoretical issues as well as possible new observational ones arising from the explosive development of cosmology in the last two decades offer the motivation and lead a large amount of research to be devoted in constructing various extensions and modifications In this review all extended theories and scenarios are first examined under the light of theoretical consistency and are then applied in various geometrical backgrounds such as the cosmological and the spherical symmetric ones Their predictions at both the background and perturbation levels and concerning cosmology at early intermediate and late times are then confronted with the huge amount of observational data that astrophysics and cosmology has been able to offer in the last two decades Theories scenarios and models that successfully and efficiently pass the above steps are classified as viable and are candidates for the description of Nature allowing readers to get a clear overview of the state of the art and where the field of modified gravity is likely to go This work was performed in the framework of the COST European Action Cosmology and Astrophysics Network for Theoretical Advances and Training Actions CANTATA
