

Chapter 27

MAN AND HIS ENVIRONMENT

Importance:**Definition:**

Environment is a treasure of all types of resources essential to maintain life on earth. Environment is a direct or indirect source for food, shelter, clothing, fuel etc. for humans.

Primitive Human Being:

At the past humans functioned as natural predators (because they used to kill animals for their food) and herbivores (also feeding on natural plants).

Progress in Agriculture:

With the adoption of agriculture, some 10,000 years ago, conversion of land to agricultural production began to increase to provide food to growing human population.

Natural diversity was replaced by a few useful species. In this way pattern of food web was changed by eliminating all those species that would subtract or share the energy resources with man.

ENVIRONMENTAL RESOURCES

These resources are broadly classified into two categories.

- (i) Renewable (ii) Non-renewable

(i) Renewable Resources:**Definition:**

These are the resources, which can be produced again in short time. They are never depleted and are recycled in the nature.

Examples:

Air, water, food, land, forests and wild life are renewable resources.

(ii) Non-Renewable Resources:**Definition:**

These are the resources, which cannot be regenerated in a few generations time. These resources are exhaustible and once consumed cannot be replaced.
