Ludewig Lichter Software Engineering:

Software Engineering: Effective Teaching and Learning Approaches and Practices Ellis, Heidi J.C., Demurjian, Steven A., Naveda, J. Fernando, 2008-10-31 Over the past decade software engineering has developed into a highly respected field. Though computing and software engineering education continues to emerge as a prominent interest area of study, few books specifically focus on software engineering education itself. Software Engineering: Effective Teaching and Learning Approaches and Practices presents the latest developments in software engineering education, drawing contributions from over 20 software engineering educators from around the globe. Encompassing areas such as student assessment and learning, innovative teaching methods, and educational technology, this much-needed book greatly enhances libraries with its unique research content.

Model-Driven Online Capacity Management for Component-Based Software Systems André van Hoorn, 2014-10-15 Capacity management is a core activity when designing and operating distributed software systems. Particularly enterprise application systems are exposed to highly varying workloads. Employing static capacity management leads to unnecessarily high total cost of ownership due to poor resource usage efficiency. This thesis introduces a model-driven online capacity management approach for distributed component-based software systems called SLAStic. The core contributions of this approach are: a modeling language to capture relevant architectural information about a controlled software system; an architecture-based online capacity management framework based on the common MAPE-K control loop architecture; model-driven techniques supporting the automation of the approach; architectural runtime reconfiguration operations for controlling a system's capacity; as well as an integration of the Palladio Component Model. A qualitative and quantitative evaluation of the approach is performed by case studies, lab experiments, and simulation.

Guide to Automotive Connectivity and Cybersecurity Dietmar P.F. Möller, Roland E. Haas, 2019-04-03 This comprehensive text reference presents an in-depth review of the state of the art of automotive connectivity and cybersecurity with regard to trends, technologies, innovations, and applications. The text describes the challenges of the global automotive market, clearly showing where the multitude of innovative activities fit within the overall effort of cutting-edge automotive innovations and provides an ideal framework for understanding the complexity of automotive connectivity and cybersecurity. Topics and features discussed include the automotive market, automotive research and development, and automotive electrical, electronic, and software technology. It examines connected cars and autonomous vehicles and methodological approaches to cybersecurity to avoid cyber attacks against vehicles. It provides an overview on the automotive industry that introduces the trends driving the automotive industry towards smart mobility and autonomous driving, reviews automotive research and development, offering background on the complexity involved in developing new vehicle models, describes the technologies essential for the evolution of connected cars such as cyber-physical systems and the Internet of Things, presents case studies on Car2Go and car sharing, car hailing, and ridesharing, connected parking, and advanced driver assistance systems, and includes review questions.

and exercises at the end of each chapter The insights offered by this practical guide will be of great value to graduate students academic researchers and professionals in industry seeking to learn about the advanced methodologies in automotive connectivity and cybersecurity

Digital Transformation Reimund Neugebauer,2019-05-14 With the exception of written letters and personal conversations digital technology forms the basis of nearly every means of communication and information that we use today It is also used to control the essential elements of economic scientific and public and private life security production mobility media and healthcare Without exaggerating it is possible to say that digital technology has become one of the foundations of our technologically oriented civilization The benefits of modern data technology are so impressive and the potential for future applications so enormous that we cannot fail to promote its development if we are to retain our leading role in the competitive international marketplace In this process security plays a vital role in each of the areas of application of digital technology the more technological sectors are entrusted to data systems technology the more important their reliability becomes to us Developing digital systems further while simultaneously ensuring that they always act and respond in the best interests of people is a central goal of the technological research and development propagated and conducted by Fraunhofer
