Handbook of Thermal Process Modeling Steels Cemil Hakan Gur, Jiansheng Pan, 2008-12-22 An Emerging Tool for Pioneering Engineers Co published by the International Federation of Heat Treatment and Surface Engineering Thermal processing is a highly precise science that does not easily lend itself to improvements through modeling as the computations required to attain an accurate prediction of the microstructure and properties of work pieces is sophisticated beyond the capacity of human calculation Over the years any developments in thermal processes relied largely on empiricism and traditional practice but advancements in computer technology are beginning to change this Enhances the quest for process optimization Comprehensive and authoritative the Handbook of Thermal Process Modeling of Steels provides practicing engineers with the first complete resource that meets the needs of both those new to modeling and those hoping to profit from advances in the field Written by those with practical experience it demonstrates what is involved in predicting material response under industrial rather than laboratory conditions and consequently gives heightened insight into the physical origins of various aspects of materials behavior Encourages both the understanding and the use of real time process control Before the advent of sophisticated computers the errors inherent in computational predictions made modeling an ineffective gamble rather than a cost saving tool Today modeling shows great promise in both materials performance improvements and process cost reduction The basic mathematical models for thermal processing simulation gradually introduced to date have yielded enormous advantages for some engineering applications however much research needs to be accomplished as existing models remain highly simplified by comparison with real commercial thermal processes Yet this is quickly changing Ultimately those engineers who can move this tool of improvement out of the lab and onto the factory floor will discover vast opportunities to gain a competitive edge

Nucleation in Condensed Matter Ken Kelton, Alan Lindsay Greer, 2010-03-19 In Nucleation in Condensed Matter key theoretical models for nucleation are developed and experimental data are used to discuss their range of validity A central aim of this book is to enable the reader when faced with a phenomenon in which nucleation appears to play a role to determine whether nucleation is indeed important and to develop a quantitative and predictive description of the nucleation behavior The third section of the book examines nucleation processes in practical situations ranging from solid state precipitation to nucleation in biological systems to nucleation in food and drink Nucleation in Condensed Matter is a key reference for an advanced materials course in phase transformations It is also an essential reference for researchers in the field Unified treatment of key theories experimental evaluations and case studies Complete derivation of key models Detailed discussion of experimental measurements Examples of nucleation in diverse systems

Solidification and Crystallization Processing in Metals and Alloys Hasse Fredriksson, Ulla Åkerlind, 2012-08-13 Solidification and Crystallization Processing in Metals and Alloys Hasse Fredriksson KTH Royal Institute of Technology Stockholm Sweden Ulla Åkerlind University of Stockholm Sweden Solidification or crystallization occurs when atoms are

transformed from the disordered liquid state to the more ordered solid state and is fundamental to metals processing
Conceived as a companion volume to the earlier works *Materials Processing during Casting* 2006 and *Physics of Functional Materials* 2008 this book analyzes solidification and crystallization processes in depth Starting from the thermodynamic point of view it gives a complete description taking into account kinetics and mass transfer down to the final structure Importantly the book shows the relationship between the theory and the experimental results Topics covered include Fundamentals of thermodynamics Properties of interfaces Nucleation Crystal growth in vapours liquids and melts Heat transport during solidification processes Solidification structures faceted dendritic eutectic and peritectic Metallic glasses and amorphous alloy melts Solidification and Crystallization Processing in Metals and Alloys features many solved examples in the text and exercises with answers for students Intended for Masters and PhD students as well as researchers in Materials Science Engineering Chemistry and Metallurgy it is also a valuable resource for engineers in industry
