

When only two treatments are involved, ANOVA and the Student's t -test (Chapter 11) result in the same conclusions. Also, for computed test statistics, $t^2 = F$. To demonstrate this relationship, use the following example. Fourteen randomly selected students enrolled in a history course were divided into two groups, one consisting of six students who took the course in the normal lecture format. The other group of eight students took the course in a distance format. At the end of the course, each group was examined with a 50-item test. The following is a list of the number correct for each of the two groups.

Traditional Lecture	Distance
33	43
37	33
41	46
39	45
32	47
35	45
	46
	41
