

1-45 The pressure in a vacuum chamber is measured by a vacuum gage. The absolute pressure in the chamber is to be determined.

*Analysis* The absolute pressure in the chamber is determined from

$$P_{\text{abs}} = P_{\text{atm}} - P_{\text{vac}} = 92 - 35 = 57 \text{ kPa}$$

1-47E The pressure in a tank in SI unit is given. The tank's pressure in various English units are to be determined.

*Analysis* Using appropriate conversion factors, we obtain

$$(a) \quad P = (1500 \text{ kPa}) \left( \frac{20.885 \text{ lbf/ft}^2}{1 \text{ kPa}} \right) = 31,328 \text{ lbf/ft}^2$$

$$(b) \quad P = (1500 \text{ kPa}) \left( \frac{20.885 \text{ lbf/ft}^2}{1 \text{ kPa}} \right) \left( \frac{1 \text{ ft}^2}{144 \text{ in}^2} \right) \left( \frac{1 \text{ psia}}{1 \text{ lbf/in}^2} \right) = 217.6 \text{ psia}$$

1-56 The pressure in a pressurized water tank is measured by a multi-fluid manometer. The gage pressure of air in the tank is to be determined.

*Assumptions* The air pressure in the tank is uniform (i.e., its variation with elevation is negligible due to its low density), and thus we can determine the pressure at the air-water interface.

*Properties* The densities of mercury, water, and oil are given to be 13,600, 1000, and 850 kg/m<sup>3</sup>, respectively.

*Analysis* Starting with the pressure at point 1 at the air-water interface, and moving along the tube by adding (as we go down) or subtracting (as we go up) the  $\rho gh$  terms until we reach point 2, and setting the result equal to  $P_{\text{atm}}$  since the tube is open to the atmosphere gives

$$P_1 - \rho_{\text{water}}gh_1 + \rho_{\text{oil}}h_2 - \rho_{\text{mercury}}h_3 = P_{\text{atm}}$$

Solving for  $P_1$ ,

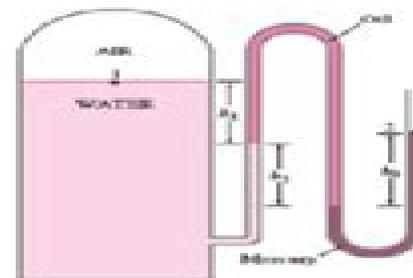

$$P_1 = P_{\text{atm}} + \rho_{\text{water}}gh_1 - \rho_{\text{oil}}h_2 + \rho_{\text{mercury}}h_3$$

or,

$$P_1 = P_{\text{atm}} + h(\rho_{\text{mercury}}h_3 - \rho_{\text{oil}}h_2 + \rho_{\text{water}}h_1)$$

Noting that  $P_{1, \text{gage}} = P_1 - P_{\text{atm}}$  and substituting,

$$\begin{aligned} P_{1, \text{gage}} &= (0.81 \text{ m}^3)(13,600 \text{ kg/m}^3)(0.4 \text{ m}) - (1000 \text{ kg/m}^3)(0.2 \text{ m}) \\ &\quad + (850 \text{ kg/m}^3)(0.3 \text{ m}) \left( \frac{1 \text{ N}}{11.8 \text{ kg} \cdot \text{m/s}^2} \right) \left( \frac{1 \text{ kPa}}{1000 \text{ N/m}^2} \right) \\ &= 48.9 \text{ kPa} \end{aligned}$$

*Discussion* Note that jumping horizontally from one tube to the next and realizing that pressure remains the same in the same fluid simplifies the analysis greatly.

Steiner, Louise Garone, 1991 The book is concerned with the application of physical techniques to the study of the structure and interactions of biopolymers The treatment is confined to those procedures applicable to solutions The material has been tested on students in actual classes thereby permitting the elimination of ambiguities and potential points of difficulty Stress has been placed upon lucidity of treatment and difficult steps in derivations have been explained The mathematical exposition has been made as clear and simple as feasible Examples of actual data are given *Thermodynamics of Solutions* Eli Ruckenstein, Ivan L. Shulgin, 2009-06-17 This book consists of a number of papers regarding the thermodynamics and structure of multicomponent systems that we have published during the last decade Even though they involve different topics and different systems they have something in common which can be considered as the signature of the present book First these papers are concerned with difficult or very nonideal systems i e systems with very strong interactions e g hydrogen bonding between components or systems with large differences in the partial molar volumes of the components e g the aqueous solutions of proteins or systems that are far from normal conditions e g critical or near critical mixtures Second the conventional thermodynamic methods are not sufficient for the accurate treatment of these mixtures Last but not least these systems are of interest for the pharmaceutical biomedical and related industries In order to meet the thermodynamic challenges involved in these complex mixtures we employed a variety of traditional methods but also new methods such as the fluctuation theory of Kirkwood and Buff and ab initio quantum mechanical techniques The Kirkwood Buff KB theory is a rigorous formalism which is free of any of the approximations usually used in the thermodynamic treatment of multicomponent systems This theory appears to be very fruitful when applied to the above mentioned difficult systems **CRC Handbook of Phase Equilibria and Thermodynamic Data of Copolymer**

**Solutions** Christian Wohlfarth, 2010-11-22 Ten years after the debut of the expansive CRC Handbook of Thermodynamic Data of Copolymer Solutions The CRC Handbook of Phase Equilibria and Thermodynamic Data of Copolymer Solutions updates and expands the world's first comprehensive source of this vital data Author Christian Wohlfarth a chemical thermodynamicist specializing in phase equilibrium **CRC Handbook of Thermodynamic Data of Aqueous Polymer**

**Solutions** Christian Wohlfarth, 2004-01-06 Providing the necessary basis for any developments of theoretical thermodynamic models this book provides a complete collection of practical thermodynamic data for a variety of applications including basic and applied chemistry chemical engineering thermodynamic research computational modeling membrane science and technology and environmental and green chemistry The data which includes such developments as vapor liquid and liquid liquid equilibria low and high pressure equilibrium data enthalpic and volumetric data and second virial coefficients is necessary when studying intermolecular interactions and gaining insights into the molecular nature of mixtures **Solution**

*Chemical Thermodynamics: Advanced Applications* J. Bevan Ott, Juliana Boerio-Goates, 2000-06-16 This book is an excellent companion to *Chemical Thermodynamics Principles and Applications* Together they make a complete reference set for the practicing scientist This volume extends the range of topics and applications to ones that are not usually covered in a beginning thermodynamics text In a sense the book covers a middle ground between the basic principles developed in a beginning thermodynamics textbook and the very specialized applications that are a part of an ongoing research project As

such it could prove invaluable to the practicing scientist who needs to apply thermodynamic relationships to aid in the understanding of the chemical process under consideration The writing style in this volume remains informal but more technical than in Principles and Applications It starts with Chapter 11 which summarizes the thermodynamic relationships developed in this earlier volume For those who want or need more detail references are given to the sections in Principles and Applications where one could go to learn more about the development limitations and conditions where these equations apply This is the only place where Advanced Applications ties back to the previous volume Chapter 11 can serve as a review of the fundamental thermodynamic equations that are necessary for the more sophisticated applications described in the remainder of this book This may be all that is necessary for the practicing scientist who has been away from the field for some time and needs some review The remainder of this book applies thermodynamics to the description of a variety of problems The topics covered are those that are probably of the most fundamental and broadest interest Throughout the book examples of real systems are used as much as possible This is in contrast to many books where generic examples are used almost exclusively A complete set of references to all sources of data and to supplementary reading sources is included Problems are given at the end of each chapter This makes the book ideally suited for use as a textbook in an advanced topics course in chemical thermodynamics An excellent review of thermodynamic principles and mathematical relationships along with references to the relevant sections in Principles and Applications where these equations are developed Applications of thermodynamics in a wide variety of chemical processes including phase equilibria chemical equilibrium properties of mixtures and surface chemistry Case study approach to demonstrate the application of thermodynamics to biochemical geochemical and industrial processes Applications at the cutting edge of thermodynamics Examples and problems to assist in learning Includes a complete set of references to all literature sources
