is a standardized programming language used for managing relational databases whereas MySQL is a specific implementation of a relational database management system RDBMS that supports SQL MySQL is one of the most popular open source RDBMS and is widely used for web development What is a primary key A primary key is a unique identifier for a record in a database table It ensures that each record in the table can be uniquely identified and retrieved Primary keys are typically used to enforce entity integrity and establish relationships between tables in a relational database What is a foreign key A foreign key is a column or set of columns in a table that establishes a relationship with another table s primary key It enforces referential integrity by ensuring that values in the foreign key column s correspond to values in the primary key column s of the referenced table Foreign keys are used to create relationships between tables in a relational database What is a join in SQL A join in SQL is used to combine rows from two or more tables based on a related column between them There are different types of joins including INNER JOIN LEFT JOIN RIGHT JOIN and FULL JOIN each serving a different purpose in retrieving data from multiple tables What is the difference between INNER JOIN and LEFT JOIN INNER JOIN returns only the rows that have matching values in both tables based on the join condition LEFT JOIN on the other hand returns all the rows from the left table the first table specified in the JOIN clause along with matching rows from the right table If there are no matching rows in the right table NULL values are returned for the columns from the right table These are just a few examples of SQL interview questions and answers Depending on the role and level of expertise required interviewers may ask more advanced SQL questions related to optimization indexing normalization and performance tuning
