**Remote Sensing Digital Image Analysis** John A. Richards, 2022-01-06 Remote Sensing Digital Image Analysis provides a comprehensive treatment of the methods used for the processing and interpretation of remotely sensed image data. Over the past decade there have been continuing and significant developments in the algorithms used for the analysis of remote sensing imagery, even though many of the fundamentals have substantially remained the same. As with its predecessors, this new edition again presents material that has retained value but also includes newer techniques covered from the perspective of operational remote sensing. The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image analysis in remote sensing. The presentation level is for the mathematical non-specialist. Since the very great number of operational users of remote sensing come from the earth sciences communities, the text is pitched at a level commensurate with their background. The chapters progress logically through means for the acquisition of remote sensing images, techniques by which they can be corrected, and methods for their interpretation. The prime focus is on applications of the methods, so that worked examples are included and a set of problems concludes each chapter.

**Remote Sensing and Image Interpretation** Thomas M. Lillesand, Ralph W. Kiefer, 1979 This straightforward introduction to remote sensing provides comprehensive up to date coverage of the subject for students irrespective of their

disciplines of study or the academic department in which remote sensing is taught All the classical elements of aerial photographic interpretation and photogrammetry are described but equal emphasis is placed on non photographic sensing systems and the analysis of data from these systems using digital image processing procedures Includes coverage of image restoration enhancement classification and data merging and new sensor systems such as the Large Format Camera solid state linear arrays the Shuttle Imaging radar systems the Landsat Thematic Mapper the SPOT satellite system and the NOAA Advanced Very High Resolution Radiometer Also covers imaging spectrometry and lidar systems Contains extensive illustrations
