The Dissection of Vertebrates Second Edition provides students with a manual that combines pedagogical effective text with high quality accurate and attractive visual references. Using a systemic approach within a systematic framework for each vertebrate, this book covers several animals commonly used in providing an anatomical transition sequence. Seven animals are covered: lamprey, shark, perch, mudpuppy, frog, pigeon, and cat. This updated version includes a revised systemic section of the introductory chapter, corrections to several parts of the existing text, and new comparative skull sections included as part of the existing vertebrates and a companion site with image bank.
