ICCS20 - 20th International Conference on Composite Structures Nicholas Fantuzzi, 2017-07-24

Composite materials have aroused a great interest over the last few decades as proven by the huge number of scientific papers and industrial progress. The increase in the use of composite structures in different engineering practices justifies the present international meeting where researchers from every part of the globe can share and discuss the recent advancements regarding the use of structural components within advanced applications such as buckling, vibrations, repair, reinforcements, concrete composite laminated materials, and more recent metamaterials. Studies about composite structures are truly multidisciplinary and the given contributions can help other researchers and professional engineers in their own field. This Conference is suitable as a reference for engineers and scientists working in the professional field in the industry and the academia and it gives the possibility to share recent advancements in different engineering practices to the outside world. This book aims to collect selected plenary and key note lectures of this International Conference. For this reason, the establishment of this 20th edition of International Conference on Composite Structures has appeared appropriate to continue what has been begun during the previous editions. ICCS wants to be an occasion for many researchers from each part of the globe to meet and discuss about the recent advancements regarding the use of composite structures sandwich panels.

Design and Construction of Smart Cities Ibrahim El Dimeery,Moustafa Baraka,Syed M. Ahmed,Amin Akhnoukh,Mona B. Anwar,Mahmoud El Khafif,Nagy Hanna,Amr T. Abdel Hamid,2021-01-23 This book focuses on how to maintain environmental sustainability as one of its main principles and it addresses how smart cities serve to diminish wastes and maintain natural resources by having clean green energy that is operated by new smart technology designs Living in a smart city is not something of the future anymore it is here and it is being implemented all over the world A smart city uses different types of electronic Internet of things IoT sensors to collect data and then use these data to manage assets and resources efficiently The smart city concept integrates information and communication technology ICT and various physical devices connected to the IoT network to optimize the efficiency of city operations and services and achieve sustainable solutions to allow us to grow with proper management of our resources Smart sustainable structures and infrastructures face the need of urban areas due to the growth of populations while in the same time save our environment To achieve this we need to revisit the conventional methods in design and construction and the conventional materials which are used now to optimize the design and provide smart solutions In the past few years the consumption of resources has been massive and the waste produced from that consumption has been inconceivable This is causing environmental degradation which produces many environmental challenges such as global climate change excessive fossil fuel dependency and the growing demand for energy As well as discussing the challenges facing the civil engineering design and construction of smart cities components and presenting concepts and insight from experts and researchers from different civil engineering disciplines this book explains how to construct buildings and special structures and how to manage and monitor energy
