*Introduction to Infrared and Electro-optical Systems* Ronald G. Driggers, Melvin H. Friedman, Jonathan Nichols, 2012 This comprehensive reference details the principles and components of the Linear Shift Invariant LSI infrared and electro optical systems and shows you how to combine this approach with calculus and domain transformations to achieve a successful imaging system analysis Ultimately the steps described in this book lead to results in quantitative characterizations of performance metrics such as modulation transfer functions minimum resolvable temperature difference minimum resolvable contrast and probability of object discrimination The book includes an introduction to two dimensional functions and mathematics which can be used to describe image transfer characteristics and imaging system components You also learn diffraction concepts of coherent and incoherent imaging systems which show you the fundamental limits of their performance By using the evaluation procedures contained in this desktop reference you become capable of predicting both sensor test and field performance and quantifying the effects of component variations **Physics**, [Electromagnetic Waves and Lasers](#) Wayne D. Kimura, 2017-12-08 This book reviews basic electromagnetic EM wave theory and applies it specifically to lasers in order to give the reader not only tangible examples of how the theory is manifested in real life but also practical

knowledge about lasers and their operation and usage The latter can be useful for those involved with using lasers As a short treatise on this subject matter this book is not intended to dwell deeply into the details of EM waves nor lasers A bibliography is provided for those who wish to explore in more depth the topics covered in this book Rather the aim of this book is to offer a quick overview which will allow the reader to gain a competent general understanding of EM waves and lasers **Lens**
