Finite Element Analysis C. S. Krishnamoorthy, 1987 Computational Mechanics - New Frontiers for the New Millennium Prof. Valliappan, Prof. N. Khalili, 2012-12-02 These Proceedings contain the papers presented at the 1st Asian Pacific Congress on Computational Mechanics held in Sydney on 20-23 November 2001. The theme of the first Congress of the Asian Pacific Association for Computational Mechanics in the new millennium is New Frontiers for the New Millennium. The papers cover such new frontiers as micromechanics, contact mechanics, environmental geomechanics, chemo-thermo mechanics, inverse techniques, homogenization, meshless methods, smart materials, smart structures, and graphic visualization, besides the general topics related to the application of finite element and boundary element methods in structural mechanics, fluid mechanics, geomechanics, and biomechanics.

Application of the Finite Element Method to the Seismic Design and Analysis of Large Moment End-plate Connections Timothy Wayne Mays, 2000. Due to problems associated with welded moment connections uncovered after the Northridge earthquake, large bolted connections are becoming a much more attractive alternative for design in seismic regions. However, stringent design requirements established by the AISC Seismic Provisions for Structural Steel Buildings 1997 make current moment end plate configurations and design procedures inadequate for multi-story buildings. This dissertation first examines and critiques current seismic design philosophies as applied to moment end plate connections. Next, the finite element method is used to develop much needed design procedures for large moment end plate connections and to improve the understanding of the role of geometric parameters, e.g., bolt pitch and stiffener locations, in the response of these connections. Finally, single story and multi story frames incorporating large moment end plate connections with known moment rotation characteristics are considered under seismic loading to determine the effectiveness of these systems in dissipating energy caused by the ground motion.

Structural Steel Semirigid Connections Ciro Faella, Vincenzo Piluso, Gianvittorio Rizzano, 1999-10-27 Although the semirigidity concept was introduced many years ago steel structures are usually designed by assuming that beam to column joints are either pinned or rigid These assumptions allow a great simplification in structural analysis and design but they neglect the true behavior of joints The economic and structural benefits of semirigid joints are well known and much has been written about their use in braced frames However they are seldom used by designers because most semirigid connections have highly nonlinear behavior so that the analysis and design of frames using them is difficult In fact the design problem becomes more difficult as soon as the true rotational behavior of beam to column joints is accounted for the design problem requires many attempts to achieve a safe and economical solution Structural Steel Semirigid Connections provides a comprehensive source of information on the design of semirigid frames up to the complete detailing of beam to column connections and focuses on the prediction of the moment rotation curve of connections This is the first work that contains procedures for predicting the connection plastic rotation

Finite Element Analysis for Engineering Design Junuthula N. Reddy, C.S. Krishnamoorthy, K.N. Seetharamu, 1988-06-28 From the preface The advent of computers has opened new horizons in the field of engineering design In the realm of analysis for engineering design the finite element method has emerged as a powerful tool for modeling and analysis of solids and structures of complex geometries and variable material properties in many areas of engineering design such as machine components pressure vessels nuclear reactors off shore structures steel and concrete buildings bridges towers automobile components turbine parts power plant structures etc The text book literature on the finite element method exists at an introductory level through the new and more advanced level of simple applications Modeling and analysis of practical problems continue to be developed and published in technical journals Developments are also taking place in the use of artificial intelligence techniques in expert systems to advise the analysts on the choice of the elements type of analysis discretization etc for solving complicated problems It is essential to periodically synthesize all the developments on the finite element method and its applications to practical problems of engineering design and also to identify the future areas of research both in the domains of academic research and industrial applications Keeping this in mind an advanced study institute was organized at Indian Institute of Technology Madras India during Aug 1 10 1988 This volume contains lecture notes prepared by the invited lecturers attending the Advanced Study Institute It should serve as a ready reference to researchers and practitioners engaged in the finite element analysis related to engineering design in several disciplines
