*First Course in Mathematical Statistics. 2nd Ed* C. E. Weatherburn,1962     *A First Course in Mathematical Statistics.*  
(Second Edition, Reprinted with Corrections.). Charles Ernest Weatherburn,1949     *A Course in Mathematical Statistics*  
George G. Roussas,1997-03-12 *A Course in Mathematical Statistics Second Edition* contains enough material for a year long  
course in probability and statistics for advanced undergraduate or first year graduate students or it can be used  
independently for a one semester or even one quarter course in probability alone It bridges the gap between high and  
intermediate level texts so students without a sophisticated mathematical background can assimilate a fairly broad spectrum  
of the theorems and results from mathematical statistics The coverage is extensive and consists of probability and  
distribution theory and statistical inference Contains 25% new material Includes the most complete coverage of sufficiency

book is sequel to a book *Statistical Inference Testing of Hypotheses* published by PHI Learning Intended for the postgraduate

students of statistics it introduces the problem of estimation in the light of foundations laid down by Sir R A Fisher 1922 and follows both classical and Bayesian approaches to solve these problems The book starts with discussing the growing levels of data summarization to reach maximal summarization and connects it with sufficient and minimal sufficient statistics The book gives a complete account of theorems and results on uniformly minimum variance unbiased estimators UMVUE including famous Rao and Blackwell theorem to suggest an improved estimator based on a sufficient statistic and Lehmann Scheffe theorem to give an UMVUE It discusses Cramer Rao and Bhattacharyya variance lower bounds for regular models by introducing Fishers information and Chapman Robbins and Kiefer variance lower bounds for Pitman models Besides the book introduces different methods of estimation including famous method of maximum likelihood and discusses large sample properties such as consistency consistent asymptotic normality CAN and best asymptotic normality BAN of different estimators Separate chapters are devoted for finding Pitman estimator among equivariant estimators for location and scale models by exploiting symmetry structure present in the model and Bayes Empirical Bayes Hierarchical Bayes estimators in different statistical models Systematic exposition of the theory and results in different statistical situations and models is one of the several attractions of the presentation Each chapter is concluded with several solved examples in a number of statistical models augmented with exposition of theorems and results KEY FEATURES Provides clarifications for a number of steps in the proof of theorems and related results Includes numerous solved examples to improve analytical insight on the subject by illustrating the application of theorems and results Incorporates Chapter end exercises to review student s comprehension of the subject Discusses detailed theory on data summarization unbiased estimation with large sample properties Bayes and Minimax estimation separately in different chapters

*A First Course in Mathematical Statistics* Alan Lawson Little,1961

*Statistical Theory and Inference* David J. Olive,2014-05-07 This text is for a one semester graduate course in statistical theory and covers minimal and complete sufficient statistics maximum likelihood estimators method of moments bias and mean square error uniform minimum variance estimators and the Cramer Rao lower bound an introduction to large sample theory likelihood ratio tests and uniformly most powerful tests and the Neyman Pearson Lemma A major goal of this text is to make these topics much more accessible to students by using the theory of exponential families Exponential families indicator functions and the support of the distribution are used throughout the text to simplify the theory More than 50 brand name distributions are used to illustrate the theory with many examples of exponential families maximum likelihood estimators and uniformly minimum variance unbiased estimators There are many homework problems with over 30 pages of solutions
