ix Preface This is the first volume of a series of integrated textbooks for the analysis and design of structures. The series is projected to include a first volume in Matrix Structural Analysis to be followed by volumes in Structural Dynamics and Earthquake Engineering as well as other volumes dealing with specialized or advanced topics in the analysis and design of structures. An important objective in the preparation of these volumes is to integrate and unify the presentation using common notation, symbols, and general format. Furthermore, all of these volumes will be using the same structural computer program SAP2000 developed and maintained by Computers and Structures Inc., Berkeley, California.

Matrix Analysis of Structures Aslam Kassimali, 1999 Accompanying CD-ROM contains computer software for analyzing two and three dimensional framed structures. The software, which can be used to analyze plane and space trusses, beams, plane and space frames, and grids, is based on the matrix stiffness method.

Structural Stability and Design M.A. Bradford, G.J. Hancock, S. Kitipornchai, 2006-02-20 The papers in this volume represent the most recent findings in the area of structural stability and encompass the more traditional areas of lateral torsional local buckling as well as newer applications in testing structural analysis composite concrete structures. Also included is the state of the art research into dynamic cyclic loading with the latter application being of particular importance in the area of earthquake engineering. The breadth of the scope of

contributions as well as the regional nature of the research represented by the geographic spread of the papers across some 5 continents will ensure that this volume is a reference for recent trends in the research and application of techniques in structural stability and design
