

## Default methods

Evolve interfaces & create traits

```
//Default methods in interfaces
@FunctionalInterface
interface Utilities {
    default Consumer<Runnable> r() {
        return (r) -> r.run();
    }
    // default methods, still functional
    Object function(Object o);
}
class A implements Utilities { // implement
    public Object function(Object o) {
        return new Object();
    }
    // call a default method
    Consumer<Runnable> c = new A().r();
}
```

## Lambdas

Syntax:  
{parameters} -> expression  
{parameters} -> { statements; }

```
// takes an object, returns an Integer
Function<Long, String> f = (l) -> l.toString();
// takes nothing gives you Threads
Supplier<Thread> s = Thread::currentThread;
// takes a string as the parameter
Consumer<String> c = System.out::println;

// use them with streams
new ArrayList<String>().stream()
// peek: doing streams without changes
peek(e -> System.out.println(e)),
// map: convert every element into something
map(e -> e.hashCode()),
// filter: pass some elements through
filter(e -> ((e.hashCode() % 2) == 0)),
// collect all values from the stream
collect(Collectors.toCollection(TreeSet::new))
```

## java.util.Optional

A container for possible null values

```
// Create an optional
Optional<String> optional =
Optional.ofNullable(s);
// process the optional
optional.map(s -> "Rebellabs:" + s);
// map a Function that returns Optional
optional.flatMap(s -> Optional.ofNullable(s));

// run if the value is there
optional.ifPresent(System.out::println);
// get the value or throw an exception
optional.get();

// return the value or the given value
optional.orElse("Hello world!");
// return empty Optional if not satisfied
optional.filter(s -> s.startsWith("Rebellabs"));
```

## Rules of Thumb

Traits: 1 default method per interface  
Don't enhance functional interfaces  
Only conservative implementations

Expressions over statements  
Refactor to use method references  
Chain lambdas rather than growing them

Fields - use plain objects  
Method parameters, use plain objects  
Return values - use Optional  
Use `orElse()` instead of `get()`

code significantly more adaptable and reusable Convenience thanks to high level Stream methods Streams are wrappers around collections or other data sources that use lambda expressions pervasively They support many convenient and high performance operations that use lambdas including map reduce filter and forEach These methods make many types of code much simpler to write compared to the clunky and low level Collection methods Faster and more memory efficient code thanks to lazy evaluation and automatic parallelization Streams support lazy evaluation so if you map firstName over Employees filter ones that start with P then choose the first it really only maps and filters until the first match Streams can also be designated as parallel so that t
