Fuzzy Spiking Neural Networks Haider Raza, 2012-01-09 Master's Thesis from the year 2011 in the subject Engineering Computer Engineering grade 8 84 Manav Rachna International University course Master of Technology M Tech language English abstract This dissertation presents an introductory knowledge to computational neuroscience and major emphasize on the branch of computational neuroscience called Spiking Neural Networks SNNs SNNs are also called the third generation neural networks It has become now a major field of Soft Computing In this we talk about the temporal characteristics of neuron and studied the dynamics of it We have presented SNNs architecture with fuzzy reasoning capability Neuron selectivity is facilitated using receptive fields that enable individual neurons to be responsive to certain spike train frequencies and behave in a similar manner as fuzzy membership functions The network of SNNs consists of three layers that is input hidden and output layer The topology of this network is based on Radial basis Network which can be regarded as universal approximators The input layer receives the input in the form of frequency which produces the spikes through linear encoding There is another method of encoding called Poisson encoding this encoding is used where the data is large The hidden layer use Receptive Field RF to process the input and thus it is frequency selective The output layer is only responsible for learning The learning is based on local learning The XOR classification problem is used to test the capabilities of the network There is a problem of continuous updating of weight arises This issue of weight is resolved by using STDP window and fuzzy reasoning The dissertation demonstrates how it is possible to obtain fuzzy reasoning capability from biological models of spiking neurons The fuzzy spiking neural network implements fuzzy rules by configuration of receptive fields antecedent conjunction with excitatory and inhibitory connections and inferencing via a biologically plausible supervised learning algorithm In this way the resulting system utilizes a higher level of knowledge representation

Sandham, M. Leggett, 2003-12-31 The past fifteen years has witnessed an explosive growth in the fundamental research and applications of artificial neural networks ANNs and fuzzy logic FL The main impetus behind this growth has been the ability of such methods to offer solutions not amenable to conventional techniques particularly in application domains involving pattern recognition prediction and control Although the origins of ANNs and FL may be traced back to the 1940s and 1960s respectively the most rapid progress has only been achieved in the last fifteen years This has been due to significant theoretical advances in our understanding of ANNs and FL complemented by major technological developments in high speed computing In geophysics ANNs and FL have enjoyed significant success and are now employed routinely in the following areas amongst others 1 Exploration Seismology a Seismic data processing trace editing first break picking deconvolution and multiple suppression wavelet estimation velocity analysis noise identification reduction statics analysis dataset matching prediction attenuation b AVO analysis c Chimneys d Compression I dimensionality reduction e Shear wave analysis f Interpretation event tracking lithology prediction and well log analysis prospect appraisal hydrocarbon prediction inversion reservoir characterisation quality assessment tomography 2 Earthquake Seismology and Subterranean Nuclear Explosions 3 Mineral Exploration 4 Electromagnetic I Potential Field Exploration a Electromagnetic methods b Potential field methods c Ground penetrating radar d Remote sensing e inversion
