Description Buy the Paperback Version of this Book and get the Kindle version for FREE Sometimes when something goes wrong in your body you notice it right away For example if you fall and break a bone the pain and other symptoms are readily obvious But other times the damage occurs unnoticed for a long time and can show up as a host of other problems Take for instance the variety of inflammatory diseases like arthritis and asthma Even cancer is a symptom of something else going on in your body This something is often connected with chronic inflammation occurring in your body Inflammation is not always a bad guy Sometimes you need it in order to protect and heal your body Like when you broke that bone the pain signals your body that something is wrong The swelling and redness indicate that blood is rushing to area and fluid is leaking into the tissue to cushion the broken bone But what happens when inflammation goes wrong Chronic inflammation means that your body is inflamed all the time and it begins to think that your own body is the problem It begins to attack your healthy tissue and cells in an attempt to heal it When this happens more problems arise Things like type 2 diabetes and heart disease for example are results of chronic inflammation many times The challenge with chronic inflammation is that you may not realize it is happening right away You may not see the swelling or redness or may dismiss it as nothing serious You may also treat a symptom of chronic inflammation without realizing what it really is Unfortunately treating the symptoms alone are not going to reduce the inflammation wrecking havoc on your body You need to treat the source of the problem the inflammation itself
