

CHAPTER 1

INTRODUCTION

Petrol vehicles use a device called a carburetor for supplying the air-fuel mixture in the correct ratio to the cylinders in all rpm ranges. Due to its relatively simple construction, it has been used almost exclusively on gasoline engines in the past. However, in response to recent demands for cleaner exhaust emissions, more economical fuel consumption, improved drivability, etc., the carburetor must be equipped with various complicated devices, making it a more complex system.

So, in place of the carburetor, therefore, the MPFI (multi-point fuel injection) system is used, assuring proper air-fuel ratio to the engine by electrically injecting fuel in accordance with various driving conditions.
