# Unit 5: moving straight ahead

## Investigation 3 Solving Equations

I can recognize problem situations in which two variables have a linear relationship and solve rate of change problems.

In the last investigation, you examined the patterns in the table and graph for the relationship relating Alana's distance  $d$  and money earned  $A$  in the walkathon.

What is another way to represent the relationship?

The graph of the relationship is a line that contains infinitely many points. The coordinates of each point can be substituted into the equation to make a true statement. The coordinates of these points are solutions to the equation.

### EXAMPLE:

The point  $(3, 6.5)$  lies on the line of  $A = 5 + 0.5d$ . This means that  $d = 3$ ,  $A = 6.5$ , and  $6.5 = 5 + 0.5(3)$  is a true statement. So the coordinate pair  $(3, 6.5)$  is a solution to the equation.
