paradigm in the auto industry but one that is not fully understood by car manufacturers In general hybrid electric vehicles HEV are designed without regard to the mechanics of the power train which is developed similarly to its counterparts in internal combustion engines Hybrid Electric Power Train Engineering and Technology Modeling Control and Simulation provides readers with an academic investigation into HEV power train design using mathematical modeling and simulation of various hybrid electric motors and control systems This book explores the construction of the most energy efficient power trains which is of importance to designers manufacturers and students of mechanical engineering This book is part of the Research Essentials collection

**Carsharing for sustainable urban mobility. Possibilities and obstacles of integrating car sharing into public transport**, 2022-08-10 Master s Thesis from the year 2020 in the subject Business economics Market research grade 1 0 International School of Management Dortmund language English abstract This master s thesis aims to examine the key drivers of development in the car sharing industry in order to derive possible effects on sustainable urban mobility The resulting conclusions provide information about areas in which the various car sharing stakeholders must take action and which processes should be restructured if necessary In addition it is examined whether positive or negative effects of car sharing on public transport can already be identified Based on the research location selected for this study the possibilities and obstacles with which the concept of car sharing can be integrated into public transport will also be examined At the beginning of this paper the reader is introduced to the basics of the sharing economy giving them a basic understanding of the further course of the study In order to delve deeper into the topic the origin of the sharing economy will be determined and its relevance in the socio economic environment demonstrated The motives of the members of sharing services will be outlined Since technological progress and electric mobility are the decisive drivers for the change in consumer behaviour these areas will be discussed The focus of this master s thesis lies on commercial car sharing which is therefore covered in more detail than private car sharing It will be clarified how the sharing mobility has developed in recent years and what motives under consideration of economic and ecological aspects have led consumers to use it to an ever increasing extent Besides the advantages and disadvantages from the customer s point of view are worked out in order to examine whether reasons for the enormous market growth can already be deduced from this Based on the preceding qualitative data collection conclusions are drawn about the possible effects on urban sustainability and both opportunities and challenges are elaborated so that approaches for corrective action can be crystallized With the help of this precise picture of the individual topics it can be concluded whether car sharing as such contributes to sustainable development in the Federal Republic of Germany and thus generates positive economic and social effects in addition to the positive ecological effects

**Novel Highly Flexible Modular Power Electronics for Energy Storage and Conversion Systems** Nima Tashakor, 2023-09-04 This book describes improvements to the electronics topology of current modular reconfigurable storages by integrating parallel connectivity reducing the semiconductor count by eliminating irrelevant

states and improving the monitoring techniques through higher function integration The author also discusses each topology's main advantages and disadvantages at the micro and macro levels Moreover the presented modeling of modular reconfigurable storage systems with different storages helps in better understanding the dynamics of the system The book establishes novel optimum or near optimum methods for exploiting the DOF degrees of freedom to achieve higher efficiency more function integration better balancing or output quality Additionally through a detailed analysis of different modulation techniques this book presents novel modulation methods enhances the state of the art or in some cases simplifies the complexity of implementation The concept of interconnected multi port systems through integrating novel modulation techniques and the acquired understanding of the behavior of modular dynamically reconfigurable storages is explained The presented concepts can significantly reduce the number of energy conversion stages as well as the final footprint of the system reduce the number of required controlled semiconductors and save costs It also presents novel monitoring techniques based on estimators that can significantly reduce the number of required sensors and the required data communication bandwidth
