nstead-of-fzf?utm_source=newsletter&utm_medium=email&utm_ca
mpaign=rss

Filtering long lists of output on the command line usually
involves taking the list of items — maybe the output of ls,
git or find — and doing something with it. If you're lucky
you can mechanically filter the list with pipes and grep.
If
you're unlucky and you can't think of a heuristic, you'll
have to sift through the output with a pager like less and
remember the items you want to keep.
