Mastering The Game Of Go Without Human Knowledge:

<u>The Alignment Problem</u> Brian Christian,2020-10-06 If you re going to read one book on artificial intelligence this is the one Stephen Marche New York Times A jaw dropping exploration of everything that goes wrong when we build AI systems and the movement to fix them Today s machine learning systems trained by data are so effective that we ve invited them to see and hear for us and to make decisions on our behalf But alarm bells are ringing Recent years have seen an eruption of concern as the field of machine learning advances When the systems we attempt to teach will not in the end do what we want or what we expect ethical and potentially existential risks emerge Researchers call this the alignment problem Systems cull r sum s until years later we discover that they have inherent gender biases Algorithms decide bail and parole and appear to assess Black and White defendants differently We can no longer assume that our mortgage application or even our medical tests will be seen by human eyes And as autonomous vehicles share our streets we are increasingly putting our lives in their hands The mathematical and computational models driving these changes range in complexity from something that can fit on a spreadsheet to a complex system that might credibly be called artificial intelligence They are steadily replacing both human judgment and explicitly programmed software In best selling author Brian Christian s riveting account we meet the alignment problem s first responders and learn their ambitious plan to solve it before our hands are completely off the wheel In a masterful blend of history and on the ground reporting Christian traces the explosive growth in the field of machine learning and surveys its current sprawling frontier Readers encounter a discipline finding its legs amid exhilarating and sometimes terrifying progress Whether they and we succeed or fail in solving the alignment problem will be a defining human story The Alignment Problem offers an unflinching reckoning with humanity s biases and blind spots our own unstated assumptions and often contradictory goals A dazzlingly interdisciplinary work it takes a hard look not only at our technology but at our culture and finds a story by turns harrowing and hopeful *Principles of Machine Learning* Wenmin Wang,2024-10-26 Conducting an in depth analysis of machine learning this book proposes three perspectives for studying machine learning the learning frameworks learning paradigms and learning tasks With this categorization the learning frameworks reside within the theoretical perspective the learning paradigms pertain to the methodological perspective and the learning tasks are situated within the problematic perspective Throughout the book a systematic explication of machine learning principles from these three perspectives is provided interspersed with some examples The book is structured into four parts encompassing a total of fifteen chapters The inaugural part titled Perspectives comprises two chapters an introductory exposition and an exploration of the conceptual foundations The second part Frameworks subdivided into five chapters each dedicated to the discussion of five seminal frameworks probability statistics connectionism symbolism and behaviorism Continuing further the third part Paradigms encompasses four chapters that explain the three paradigms of supervised learning unsupervised learning and reinforcement learning and narrating several quasi paradigms emerged in

machine learning Finally the fourth part Tasks comprises four chapters delving into the prevalent learning tasks of classification regression clustering and dimensionality reduction This book provides a multi dimensional and systematic interpretation of machine learning rendering it suitable as a textbook reference for senior undergraduates or graduate students pursuing studies in artificial intelligence machine learning data science computer science and related disciplines Additionally it serves as a valuable reference for those engaged in scientific research and technical endeavors within the realm of machine learning The translation was done with the help of artificial intelligence A subsequent human revision was done primarily in terms of content   *Intelligent Mobile Projects with TensorFlow* Jeff Tang,2018-05-22 Create Deep Learning and Reinforcement Learning apps for multiple platforms with TensorFlow Key Features Build TensorFlow powered AI applications for mobile and embedded devices Learn modern AI topics such as computer vision NLP and deep reinforcement learning Get practical insights and exclusive working code not available in the TensorFlow documentation Book Description As a developer you always need to keep an eye out and be ready for what will be trending soon while also focusing on what s trending currently So what s better than learning about the integration of the best of both worlds the present and the future Artificial Intelligence AI is widely regarded as the next big thing after mobile and Google s TensorFlow is the leading open source machine learning framework the hottest branch of AI This book covers more than 10 complete iOS Android and Raspberry Pi apps powered by TensorFlow and built from scratch running all kinds of cool TensorFlow models offline on device from computer vision speech and language processing to generative adversarial networks and AlphaZero like deep reinforcement learning You ll learn how to use or retrain existing TensorFlow models build your own models and develop intelligent mobile apps running those TensorFlow models You ll learn how to quickly build such apps with step by step tutorials and how to avoid many pitfalls in the process with lots of hard earned troubleshooting tips What you will learn Classify images with transfer learning Detect objects and their locations Transform pictures with amazing art styles Understand simple speech commands Describe images in natural language Recognize drawing with Convolutional Neural Network and Long Short Term Memory Predict stock price with Recurrent Neural Network in TensorFlow and Keras Generate and enhance images with generative adversarial networks Build AlphaZero like mobile game app in TensorFlow and Keras Use TensorFlow Lite and Core ML on mobile Develop TensorFlow apps on Raspberry Pi that can move see listen speak and learn Who this book is for If you re an iOS Android developer interested in building and retraining others TensorFlow models and running them in your mobile apps or if you re a TensorFlow developer and want to run your new and amazing TensorFlow models on mobile devices this book is for you You ll also benefit from this book if you re interested in TensorFlow Lite Core ML or TensorFlow on Raspberry Pi   **The Cambridge Handbook of Artificial Intelligence** Larry A. DiMatteo,Cristina Poncibò,Michel Cannarsa,2022-08-11 The technology and application of artificial intelligence AI throughout society continues to grow at unprecedented rates which raises numerous legal questions that to

date have been largely unexamined Although AI now plays a role in almost all areas of society the need for a better understanding of its impact from legal and ethical perspectives is pressing and regulatory proposals are urgently needed This book responds to these needs identifying the issues raised by AI and providing practical recommendations for regulatory technical and theoretical frameworks aimed at making AI compatible with existing legal rules principles and democratic values An international roster of authors including professors of specialized areas of law technologists and practitioners bring their expertise to the interdisciplinary nature of AI **Technologies and Applications of Artificial Intelligence** Wei-Ta Chu,Chih-Ya Shen,Hong-Han Shuai,2025-05-14 This two volume set CCIS 2414 and CCIS 2415 constitutes the refereed proceedings of the 29th International Conference on Technologies and Applications of Artificial Intelligence TAAI 2024 held in Hsinchu Taiwan during December 6 7 2024 The 49 full papers presented in these two volumes were carefully reviewed and selected from 147 submissions The papers are organized in the following topical sections Part I Data Robustness Image Analysis Knowledge Representation and Management Games Machine Learning and Applications AI Studies JSAI Special Session 1 Part II JSAI Special Session 2 Japan Special Session 3 International Track Special Session
