Beckmann, Theory of the Price Index Wolfgang Eichhorn, Joachim Voeller, 1976 **Selected Topics in Operations Research and Mathematical Economics** G. Hammer, Diethard Pallaschke, 2012-12-06 Let E^N be the usual vector space of real N uples with the usual inner product denoted by $\langle \cdot, \cdot \rangle$ In this paper P is a nonempty compact polyhedral set of E^N f is a real valued function defined on E^N continuously differentiable and $f|_P$ is the line ly constrained minimization problem stated as $\min_{x \in P} f(x)$ For computing stationary points of problem t_j we propose a method which attempts to operate within the linear simplex method structure This method then appears as a same type of method as the convex simplex method of Zangwill 6 It is however different and has the advantage of being less technical with regards to the Zangwill method It has also a simple geometrical interpretation which makes it more under standable and more open to other improvements Also in the case where f is convex an implementable line search is proposed which is not the case in the Zangwill method Moreover if $f(x) = c \cdot x$ this method will coincide with the simplex method this is also true in the case of the convex simplex method i f $f(x) = I \cdot |x|$ 12 it will be almost the same as the algorithm given by Bazaraa Goode Rardin 2 **Economics for Mathematicians** John William Scott Cassels, 1981-12-10 This is the expanded notes of a course intended to introduce students specializing in mathematics to some of the central ideas of traditional economics The book should be readily accessible to anyone with some training in university mathematics more advanced mathematical tools are explained in the appendices Thus this text could be used for undergraduate mathematics courses or as supplementary reading for students of mathematical economics
