**Dynamic Modeling and Predictive Control in Solid Oxide Fuel Cells** Biao Huang, Yutong Qi, A. K. M. Monjur Murshed, 2013-02-18 The high temperature solid oxide fuel cell SOFC is identified as one of the leading fuel cell technology contenders to capture the energy market in years to come. However, in order to operate as an efficient energy generating system, the SOFC requires an appropriate control system which in turn requires a detailed modelling of process dynamics. Introducing state of the art dynamic modelling, estimation and control of SOFC systems, this book presents original modelling methods and brand new results as developed by the authors. With comprehensive coverage and bringing together many aspects of SOFC technology, it considers dynamic modelling through first principles and data based approaches and considers all aspects of control including modelling, system identification, state estimation, conventional and advanced control. Key features: Discusses both planar and tubular SOFC and detailed and simplified dynamic modelling for SOFC. Systematically describes single model and distributed models from cell level to system level. Provides parameters for all models developed for easy reference and reproducing of the results. All theories are illustrated through vivid fuel cell application examples such as state of the art unscented Kalman filter model, predictive control and system identification techniques to SOFC systems. The tutorial approach makes it perfect for learning the fundamentals of chemical engineering system identification, state estimation and process control. It is suitable for graduate students in chemical, mechanical, power and electrical engineering, especially those in process control, process systems engineering, control systems or fuel cells. It will also aid researchers who need a reminder of the basics as well as an overview of current techniques in the dynamic modelling and control of SOFC.

**Chemical Reactor Design and Control** William L. Luyben, 2007-07-16 Chemical Reactor Design and Control uses process simulators like Matlab, Aspen Plus and Aspen Dynamics to study the design of chemical reactors and their dynamic control. There are numerous books that focus on steady state reactor design. There are no books that consider practical control systems for real industrial reactors. This unique reference addresses the simultaneous design and control of chemical reactors. After a discussion of reactor basics, it covers three types of classical reactors: continuous stirred tank (CSTR), batch and tubular plug flow. Emphasizes temperature control and the critical impact of steady state design on the dynamics and stability of reactors. Covers chemical reactors and control problems in a plantwide environment. Incorporates numerous tables and shows step by step calculations with equations. Discusses how to use process simulators to address diverse issues and types of operations. This is a practical reference for chemical engineering professionals in the process industries, professionals who work with chemical reactors and students in undergraduate and graduate reactor design, process control and plant design courses.

**Proceedings of the ... IEEE International Conference on Electronics, Circuits, and Systems**, 1998 *On-Line Fault Detection and Supervision in the Chemical Process Industries 1998* P.S. Dhurjati, Sylvie Cauvin, 1998-10-20 The field of On Line Fault Detection and Supervision in the Chemical Process Industries is relatively young Major activity in this area has taken place only in the last fifteen years The goals of the first workshop in Delaware were to discuss various methodologies necessary for solving industrial problems in fault diagnosis supervision and to encourage interactions between academia and industry This workshop also focused on development and evaluation of methodologies for on line fault detection and supervision in the chemical process industries It addressed theory application validation performance and evaluation of methodologies such as parameter estimation observers parity equations signal analysis methods classification rule based systems with probabilistic approaches fuzzy logic and neural networks There are several trends that make the topic of this workshop especially relevant in today s world The first is the tremendous advances made in automation and information technology that can potentially bring in an ever increasing amount of information on to computer screens in the operating room of a plant Avoiding problems of information overload and converting plant data to on line useful knowledge is a key challenge In some respects one can draw parallels here to biological evolution where over billions of years human beings have evolved mental models to interpret the huge amount of information received through their senses In the absence of the time advantage that evolution has had we have to rely on methodologies such as those presented in this workshop to provide assistance to operators and engineers in interpreting plant information A second trend that makes this field relevant in today s world is the increasing emphasis on environment and safety Community activism and accidents such as those in Bhopal India have caused media spotlights to be turned on the smallest of toxic releases or loss of life due to chemical accidents The negative publicity generated by such events as well as the need to maintain the image of an environmentally conscious company make industry more sensitive to the issues of early detection of faults The third trend that makes this field very relevant is that of the globalization of the world economy Increasing globalization of the chemical process industry puts pressure on economic competitiveness and higher productivity This implies reduced down time due to faults quick and flexible response of production to supply and

demand changes increasing reliance on automation and reduced personnel
