

Answer Key

SECTION 1. THE CELL CYCLE

Cell Cycle: (1) G₁/S (G₂) - cells grow, carry out normal functions, and copy their organelles; (2) Synthesis (S) - cells replicate DNA; (3) G₂/M (G₂) - cells go through additional growth; (4) Mitosis (M) - cells undergo cell division, which involves both the processes of mitosis and cytokinesis.

1. At the time that these stages were named, scientists could not observe any activity going on in cells, so they thought there were gaps in cellular activity.
 2. G₁ and G₂
 3. in the nucleus
 4. nucleus and cytoplasm
 5. G₂
 6. The rate of cell division is linked to the body's need for that cell type. Skin cells are typically required to meet damaged conditions and must be replaced more often than liver cells.
7. The name that some scientists give to the stage where cells carry out their normal functions but are unable to divide.
8. Answers will vary. Sample answer: Cell size is limited because all substances must cross the membrane. Enough material needs to enter and exit to keep the cell alive. Since volume tends to increase faster than surface area (in a sphere or cube), the volume could quickly become too large compared to the area available for exchange. In a similar way, people in a very large building that lacks windows might not be able to exit quickly in an emergency. People in a smaller building that exits from people could probably exit more quickly.
 9. volume
9. growth and division.
10. Answers will vary, but should relate the occurrence of something (steps, phases, the motion of a wheel) to the repeating pattern of growth, DNA duplication, and cell division that occurs in eukaryotic cells.
11. cytokinesis, cyto - refers to a cell and kinesis refers to division or movement.

12. nucleus

SECTION 2. MITOSIS AND CYTOKINESIS

1. one long-continuous strand of DNA that has many genes and regulatory information.
2. so they can be more easily divided between the two nuclei.
3. Proteins need to be able to access genes during other stages of the cell cycle so that they can be used to make proteins or so that the entire DNA sequence can be copied.

DNA Diagram: Refer to Figure 2.2 for visual answer.
4. During interphase, a cell duplicates its DNA and organelles.
 5. body cells
 6. Answers will vary. Sample answer: Pat's mass can increase.

Cycle Diagram: Refer to Figure 2.4 for visual answer. Labels (clockwise): metaphase, anaphase, telophase.
7. In animal cells, the microtubule pinches together, forming a cleavage furrow. In plant cells, the microtubule cannot pinch together because of the cell wall. Instead, a cell plate is laid down between the two nuclei, which will develop into the new cell walls and cell membranes.
 8. telophase
 9. chromatin
 10. chromosomes
 11. telomeres

SECTION 3. REGULATION OF THE CELL CYCLE

1. cell division
2. platelet-derived growth factor
3. specific cells
4. cyclins
5. kinases
6. phosphorylate

Mcdougal Biology Chapter 4 Answer

Kathleen Armour

Mcdougal Biology Chapter 4 Answer:

Whispering the Secrets of Language: An Emotional Journey through **Mcdougal Biology Chapter 4 Answer**

In a digitally-driven earth wherever displays reign great and immediate connection drowns out the subtleties of language, the profound techniques and emotional subtleties concealed within phrases often move unheard. Yet, situated within the pages of **Mcdougal Biology Chapter 4 Answer** a interesting literary prize sporting with raw feelings, lies an extraordinary journey waiting to be undertaken. Penned by a skilled wordsmith, that enchanting opus attracts visitors on an introspective trip, delicately unraveling the veiled truths and profound influence resonating within the cloth of each and every word. Within the emotional depths with this touching review, we shall embark upon a heartfelt exploration of the book is key subjects, dissect their captivating publishing model, and succumb to the strong resonance it evokes deep within the recesses of readers hearts.
