Hi there **Itsourcencoders!** This time I will discuss to you what is a Library management System and how will you make a project and abstract out of it. The discussion not only explains or reports **library management** but also the **system project PDF** and what should it consist. As you read through this, you will find the **Library Management System project abstract and Modules**, downloadable **Thesis Documentation**, free **Source codes** for all programming languages and the downloadable diagrams such as **PDF** and **PPT**.

What is the Abstract of Library Management System Project Report?

The abstract of a school **library management system** is one that organizes and saves books' information electronically to meet the needs of students. Both students and library managers benefit from the system, which allows them to keep track of all of the books available in the library at all times. It allows both the administrator and the student to look for the book they want. Colleges must now keep a constant eye on the books they issue and return, as well as the transaction records. If this operation is completed manually, it will be time consuming and prone to errors.

Enabling the system to maintain track of information including the date of borrowing, the date of book return, and even detailed book information eliminates the manual recording of these information and most importantly it reduced the risk of errors. As a result, this method greatly lowers manual effort and allows for a seamless flow of library activities by eliminating the possibility of errors in the details.

Here are the List of Modules that the Library Management System should have:

- **Book Information Recording:** All the information of each books should be recorded into the system to provide the borrowers or the students the book references that they want to borrow.
- **Administrator Login:** The admin login will require the school librarian their email and password to have the main access to the system and secure every information ang transaction done in the system.
- **Users/Borrowers' Login:** This will also require the users or students email and password provided when they were registered into the system. Their email and password will serve as their access to the system in terms of borrowing books or inquiring for books.
- **Book Monitoring and Updates:** The system should save the borrowers info and the count of books that are borrowed. These records should also be updatable when the books are returned.
