DeGarmo's Materials and Processes in Manufacturing, Global Edition J. T. Black, Ronald A. Kohser, 2017-12-04
Newly revised DeGarmo's Materials and Processes in Manufacturing has been the market leading text on manufacturing and manufacturing processes courses for over fifty years. Authors J. T. Black and Ron Kohser have continued this book's long and distinguished tradition of exceedingly clear presentation and highly practical approach to materials and processes, presenting mathematical models and analytical equations only when they enhance the basic understanding of the material. Updated to reflect all current practices, standards, and materials, this edition has new coverage of additive manufacturing, lean engineering, and processes related to ceramics, polymers, and plastics. *Fundamentals of Modern Manufacturing* Mikell P. Groover, 2010-01-07
Engineers rely on Groover because of the book's quantitative and engineering-oriented approach that provides more equations and numerical problem exercises. The fourth edition introduces more modern topics, including new materials, processes, and systems. End-of-chapter problems are also thoroughly revised to make the material more relevant. Several figures have been enhanced to significantly improve the quality of artwork. All of these changes will help engineers better understand the topic and how to apply it in the field. **Resources in Education**, 1994 [El-Hi Textbooks and Serials in Print](#), 1986 *Technical Books in Print*, 1966 **Robotic Welding, Intelligence and Automation** Tzyh-Jong Tarn, Shan-Ben Chen, Changjiu Zhou, 2007-08-13
Robotic welding systems have been used in different types of manufacturing. They can provide several benefits in welding applications. The most prominent advantages of robotic welding are precision and productivity. Another benefit is that labor costs can be reduced. Robotic welding also reduces risk by moving the human welder/operator away from hazardous fumes and molten metal close to the welding arc. The robotic welding system usually involves measuring and identifying the component to be welded, welding it in position, controlling the welding parameters, and documenting the produced welds. However, traditional robotic welding systems rely heavily upon human intervention. It does not seem that the traditional robotic welding techniques by themselves can cope well with uncertainties in the welding surroundings and conditions, e.g., variation of weld pool dynamics, fluxion, solid weld torch, and etc. On the other hand, the advent of intelligent techniques provides us with a powerful tool for solving demanding real-world problems with uncertain and unpredictable environments. Therefore, it is interesting to gather current trends and to provide a high-quality forum for engineers and researchers working in the field of intelligent techniques for robotic welding systems. This volume brings together a broad range of invited and contributed papers that describe recent progress in this field.
