Physics and Engineering Kenneth Franklin Riley, Michael Paul Hobson, Stephen John Bence, 2006 **Nanoelectronic Coupled Problems Solutions** E. Jan W. ter Maten, Hans-Georg Brachtendorf, Roland Pulch, Wim Schoenmaker, Herbert De Gersem, 2019-11-06 Designs in nanoelectronics often lead to challenging simulation problems and include strong feedback couplings Industry demands provisions for variability in order to guarantee quality and yield It also requires the incorporation of higher abstraction levels to allow for system simulation in order to shorten the design cycles while at the same time preserving accuracy The methods developed here promote a methodology for circuit and system level modelling and simulation based on best practice rules which are used to deal with coupled electromagnetic field circuit heat problems as well as coupled electro thermal stress problems that emerge in nanoelectronic designs This book covers 1 advanced monolithic multirate co simulation techniques which are combined with envelope wavelet approaches to create efficient and robust simulation techniques for strongly coupled systems that exploit the different dynamics of sub systems within multiphysics problems and which allow designers to predict reliability and ageing 2 new generalized techniques in Uncertainty Quantification UQ for coupled problems to include a variability capability such that robust design and optimization worst case analysis and yield estimation with tiny failure probabilities are possible including large deviations like 6 sigma 3 enhanced sparse parametric Model Order Reduction techniques with a posteriori error estimation for coupled problems and for UQ to reduce the complexity of the sub systems while ensuring that the operational and coupling parameters can still be varied and that the reduced models offer higher abstraction levels that can be efficiently simulated All the new algorithms produced were implemented transferred and tested by the EDA vendor MAGWEL Validation was conducted on industrial designs provided by end users from the semiconductor industry who shared their feedback contributed to the measurements and supplied both material data and process data In closing a thorough comparison to measurements on real devices was made in order to demonstrate the algorithms industrial applicability *Scientific Computing with MATLAB* Dingyu Xue, YangQuan Chen, 2018-09-03 *Scientific Computing with MATLAB* Second Edition improves students ability to tackle mathematical problems It helps students understand the mathematical background and find reliable and accurate solutions to mathematical problems with the use of MATLAB avoiding the tedious and complex technical details of mathematics This edition retains the structure of its predecessor while expanding and updating the content of each chapter The book bridges the gap between problems and solutions through well grouped topics and clear MATLAB example scripts and reproducible MATLAB generated plots Students can effortlessly experiment with the scripts for a deep hands on exploration Each chapter also includes a set of problems to strengthen understanding of the material

A Study of Simulation Errors Caused Bvy Algorithms of Forest Fire Growth Models Wenbin Cui, Ajith Perera, 2008

Forest fire growth models FGMs simulate fire spread over spatially heterogeneous forest landscapes and over long periods with changing weather conditions This paper reports on the attempt to validate these models Simulation errors of a FGM arise from three major sources 1 the availability and quality of input data 2 the theoretical basis of the fire behaviour model and 3 the fire growth algorithm Errors caused by the algorithm are an indicator of the algorithm performance of FGMs The authors studied the errors by assessing the algorithm performance of three FGMs the FGM in BFOLDS Boreal Forest Landscape Dynamics Simulator Prometheus and Wildfire This report contains data on the methods used and the results obtained as well as a simulation error analysis Document
