Matlab Exercises Tu Delft:

Numerical Methods for Ordinary Differential Equations Kees Vuik, Fred Vermolen, Martin van Gijzen, Thea Vuik, 2023-02-08 In this book we discuss several numerical methods for solving ordinary differential equations We emphasize the aspects that play an important role in practical problems We confine ourselves to ordinary differential equations with the exception of the last chapter in which we discuss the heat equation a parabolic partial differential equation The techniques discussed in the introductory chapters for instance interpolation numerical quadrature and the solution to nonlinear equations may also be used outside the context of differential equations They have been included to make the book self contained as far as the numerical aspects are concerned Chapters sections and exercises marked with a are not part of the Delft Institutional Package The numerical examples in this book were implemented in Matlab but also Python or any other programming language could be used A list of references to background knowledge and related literature can be found at the end of this book Extra information about this course can be found at <http://NMODE.ewi.tudelft.nl> among which old exams answers to the exercises and a link to an online education platform We thank Matthias Moller for his thorough reading of the draft of this book and his helpful suggestions
