Unit Operations of Chemical Engineering Warren Lee McCabe, Julian Cleveland Smith, 1967      **Unit Operations of Chemical Engineering** Julian Smith, Warren McCabe, Peter Harriott, emeritus, 2004-10-27 Recently Published Unit Operations of Chemical Engineering 7th edition continues its lengthy successful tradition of being one of McGraw Hill's oldest texts in the Chemical Engineering Series Since 1956 this text has been the most comprehensive of the introductory undergraduate chemical engineering titles available Separate chapters are devoted to each of the principle unit operations grouped into four sections fluid mechanics heat transfer mass transfer and equilibrium stages and operations involving particulate solids Now in its seventh edition the text still contains its balanced treatment of theory and engineering practice with many practical illustrative examples included Almost 30% of the problems have been revised or are new some of which cover modern topics such as food processing and biotechnology Other unique topics of this text include diafiltration adsorption and membrane operations      **Unit Operations of Chemical Engineering** Warren L. McCabe, Julian C. Smith, 1965      **Unit Operations of Chemical Engineering** McCabe W. L., 1980      Unit Operations of Chemical Engineering McCabe, 1993-08-01 This is the solutions manual to a revised edition of a text on unit operations of chemical engineering which contains updated and new material reflecting in part the broadening of the chemical engineering profession into new areas such as food processing electronics and biochemical applications operations fluid mechanics heat transfer equilibrium stages and mass transfer and operations involving particulate solids and includes coverage of adsorption absorption and membrane separation There is also detailed treatment of solids handling operations and solid liquid separations of the end of chapter problems have been revised In addition there is new material on membrane separations flow measurement dispersion operations supercritical extraction pressure swing adsorption and sedimentation      **Lees' Loss Prevention in the Process Industries** Frank Lees, 2005-01-10 Over the last three decades the process industries have grown very rapidly with corresponding increases in the quantities of hazardous materials in process storage or transport Plants have become larger and are often situated in or close to densely populated areas Increased hazard of loss of life or property is continually highlighted with incidents such as Flixborough Bhopal Chernobyl Three Mile Island the Phillips 66 incident and Piper Alpha to name but a few The field of Loss Prevention is and continues to be of supreme importance to countless companies municipalities and governments around the world because of the trend for processing plants to become larger and often be situated in or close to densely populated areas thus increasing the hazard of loss of life or property This book is a detailed guidebook to defending against these and many other hazards It could without exaggeration be referred to as the bible for the process industries This is THE standard reference work for chemical and process engineering safety professionals For years it has been the most complete collection of information on the theory practice design elements equipment regulations and laws covering the field of process safety An entire library of alternative books and cross

referencing systems would be needed to replace or improve upon it but everything of importance to safety professionals engineers and managers can be found in this all encompassing reference instead Frank Lees world renowned work has been fully revised and expanded by a team of leading chemical and process engineers working under the guidance of one of the world s chief experts in this field Sam Mannan is professor of chemical engineering at Texas A principles practice codes standards data and references needed by those practicing in the field
