Design of Electric Overhead Cranes R. B. Brown, 2015-09-27 Excerpt from Design of Electric Overhead Cranes Crabs Gearing and Brake Mechanism The introduction and development of the electric motor which has revolutionized so many of the methods of manufacture and transportation has perhaps influenced the design of no other single auxiliary apparatus in the productive industries more than that of cranes and hoists The present treatise on the subject therefore has been written with the intention of placing on record the present practice in the design of overhead cranes electrically operated and of presenting such data as will aid the designer of such apparatus to properly calculate and proportion the various details and supervise their construction Overhead Travelers The overhead traveler in its various forms is probably in greater demand than any other type of electric crane on the market a fact which has induced many firms to specialize in this particular branch of crane building As a result of the continued and growing demand for these cranes many attempts have been made with more or less success to standardize as far as possible the various details of construction Electric travelers represent a type of crane which under ordinary conditions is in almost continuous service and as with other constantly working machines it is essential that rapidity of operation together with economy in current consumption be pre eminent factors to the purchaser and manufacturer alike The requirements of the former should be based on the results of general experience gained during the past few years while these results depend entirely on the skill of the designer and the workmanship The three types of ordinary travelers in use are the one motor three motor and four motor cranes The three motor and for medium and heavy cranes the four motor types have been found to be by far the most efficient and are practically speaking the only types now used for modern workshops warehouses and similar places Until quite recently the single motor type was considered preferable on account of its cheapness for engine rooms and similar places where a crane is only required occasionally The

present price of motors and their connections and the fact that single motor cranes require more gearing than the three motor type is in favor of the universal adoption of the latter more especially since several makers manufacture the crabs of this type in quantities and keep them in stock and can therefore give a quicker delivery About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works
