Cottle,Mukund N. Thapa,2017-06-11 This textbook on Linear and Nonlinear Optimization is intended for graduate and advanced undergraduate students in operations research and related fields It is both literate and mathematically strong yet requires no prior course in optimization As suggested by its title the book is divided into two parts covering in their individual chapters LP Models and Applications Linear Equations and Inequalities The Simplex Algorithm Simplex Algorithm Continued Duality and the Dual Simplex Algorithm Postoptimality Analyses Computational Considerations Nonlinear NLP Models and Applications Unconstrained Optimization Descent Methods Optimality Conditions Problems with Linear Constraints Problems with Nonlinear Constraints Interior Point Methods and an Appendix covering Mathematical Concepts Each chapter ends with a set of exercises The book is based on lecture notes the authors have used in numerous optimization courses the authors have taught at Stanford University It emphasizes modeling and numerical algorithms for optimization with continuous not integer variables The discussion presents the underlying theory without always focusing on formal mathematical proofs which can be found in cited references Another feature of this book is its inclusion of cultural and historical matters most often appearing among the footnotes This book is a real gem The authors do a masterful job of rigorously presenting all of the relevant theory clearly and concisely while managing to avoid unnecessary tedious mathematical details This is an ideal book for teaching a one or two semester masters level course in optimization it broadly covers linear and nonlinear programming effectively balancing modeling algorithmic theory computation implementation illuminating historical facts and numerous interesting examples and exercises Due to the clarity of the exposition this book also serves as a valuable reference for self study Professor Ilan Adler IEOR Department UC Berkeley A carefully crafted introduction to the main elements and applications of mathematical optimization This volume presents the essential concepts of linear and nonlinear programming in an accessible format filled with anecdotes examples and exercises that bring the topic to life The authors plumb their decades of experience in

optimization to provide an enriching layer of historical context Suitable for advanced undergraduates and masters students in management science operations research and related fields Michael P Friedlander IBM Professor of Computer Science Professor of Mathematics University of British Columbia *The Solution of Nonlinear Optimization Problems Using Successive Linear Programming* Fernando Eugenio Palacios-Gómez,1980 *Linear and Nonlinear Programming* David G. Luenberger,Yinyu Ye,2015-06-25 This new edition covers the central concepts of practical optimization techniques with an emphasis on methods that are both state of the art and popular One major insight is the connection between the purely analytical character of an optimization problem and the behavior of algorithms used to solve a problem This was a major theme of the first edition of this book and the fourth edition expands and further illustrates this relationship As in the earlier editions the material in this fourth edition is organized into three separate parts Part I is a self contained introduction to linear programming The presentation in this part is fairly conventional covering the main elements of the underlying theory of linear programming many of the most effective numerical algorithms and many of its important special applications Part II which is independent of Part I covers the theory of unconstrained optimization including both derivations of the appropriate optimality conditions and an introduction to basic algorithms This part of the book explores the general properties of algorithms and defines various notions of convergence Part III extends the concepts developed in the second part to constrained optimization problems Except for a few isolated sections this part is also independent of Part I It is possible to go directly into Parts II and III omitting Part I and in fact the book has been used in this way in many universities New to this edition is a chapter devoted to Conic Linear Programming a powerful generalization of Linear Programming Indeed many conic structures are possible and useful in a variety of applications It must be recognized however that conic linear programming is an advanced topic requiring special study Another important topic is an accelerated steepest descent method that exhibits superior convergence properties and for this reason has become quite popular The proof of the convergence property for both standard and accelerated steepest descent methods are presented in Chapter 8 As in previous editions end of chapter exercises appear for all chapters From the reviews of the Third Edition this very well written book is a classic textbook in Optimization It should be present in the bookcase of each student researcher and specialist from the host of disciplines from which practical optimization applications are drawn Jean Jacques Strodiot Zentralblatt MATH Vol 1207 2011 **Linear And Nonlinear Optimization Using Spreadsheets: Examples For Prescriptive, Predictive And Descriptive Analytics** Michael J Brusco,Stephanie Stahl,2024-10-08 The use of spreadsheets to obtain solutions to a diverse array of examples offers a reader friendly way of addressing a topic optimization that can sometimes be viewed as intimidating Many people are readily familiar with spreadsheets and how they work yet are apt to be unaware of the incredible power of Excel for solving some rather complex optimization problems A major goal of the book is to sell readers on why it is so important to understand optimization and a large collection of examples for a wide range of business decision

making areas e g production planning and scheduling workforce planning and scheduling location and supply chain distribution location of emergency services assembly line balancing vehicle routing project scheduling revenue management advertising product design payout schedules productivity measurement investment portfolio management sports league scheduling ranking models etc affords a practical mechanism for achieving that goal Another important contribution of the book is that it provides coverage of the mechanics of some common yet sophisticated statistical methods regression logistic regression discriminant analysis factor analysis and cluster analysis which are often opaque to many users of such methods

The Solution of Nonlinear Optimization Problems Using Successive Linear Programming Fernando Eugenio Palacios-Goḿez,1982   **Nonlinear Optimization** H. A. Eiselt,Carl-Louis Sandblom,2019-11-09 This book provides a comprehensive introduction to nonlinear programming featuring a broad range of applications and solution methods in the field of continuous optimization It begins with a summary of classical results on unconstrained optimization followed by a wealth of applications from a diverse mix of fields e g location analysis traffic planning and water quality management to name but a few In turn the book presents a formal description of optimality conditions followed by an in depth discussion of the main solution techniques Each method is formally described and then fully solved using a numerical example
