NAME

lisp - lisp interpreter

SYNOPSIS

lisp

DESCRIPTION

Lisp is a lisp interpreter for a dialect which closely resembles MIT's MACLISP. This lisp, known as FRANZ LISP, features an I/O facility which allows the user to change the input and output syntax, add macro characters, and maintain compatibility with upper-case only lisp systems; infinite precision integer arithmetic, and an error facility which allows the user to trap system errors in many different ways. Interpreted functions may be mixed with code compiled by liszt(1) and both may be debugged using the "Joseph Lister" trace package. A lisp containing compiled and interpreted code may be dumped into a file for later use.
