

William Heron Phillips' Gas Turbine Engine

This engine, known as the Phillips engine, was developed by William Heron Phillips in the 1930s and is the first gas turbine engine to be built in the United States.

It was the world's first gas turbine engine (GT) and was used to drive a ship's propulsion system in the 1940s. It was also used to drive a generator in the 1950s.

The engine is a gas turbine engine, which means it uses a gas to produce power. It consists of a compressor, a combustion chamber, and a turbine. The compressor compresses the air, the combustion chamber burns the fuel, and the turbine extracts the energy from the hot gases.
