Rubber products industry is an important resource based industry sector in India. Over the last decade the rubber industry has witnessed a steady and strong growth. Rubber can be deformed to a high degree of strain in a reversible manner and this special property finds use in fields as diverse as transportation, material handling, health care, and sport and leisure activities. The technology of rubber began with the natural product known as natural rubber. The establishment of the structure of natural rubber led to sustained efforts for the development of synthetic rubbers using diene monomers, such as butadiene, isoprene and chloroprene. There are various kinds of rubbers; hydrogenated rubber, cyclised rubber, chlorinated rubber, nitrile rubber, synthetic rubbers, etc. Manufacturing of tire and other rubber products involves vulcanization process, an irreversible reaction between elastomers, sulphur and other chemicals. Vulcanization is the process that takes the native rubber of the rubber tree plant and removes sulfur while heating it. This strengthens the material, allowing it to withstand higher temperatures and stay flexible in the cold. There are special applications of rubber are in the areas of adhesives, coated fabrics including packaging and luggage items and rainwear, footwear, pipes and tubings, wire insulation, cables and sheaths, tank lining for chemicals and oil storage rubber mats, rubber, sports goods, toys balloons and miscellaneous products. Rubber processing constitutes three components mixing, shaping and curing. Rubbers are difficult material to process, because in both raw and compounded state they have both viscous and elastic properties. Mixing is the most critical component of mixing processing. Mixing is usually carried out in a series of batches in a high speed internal mixer, in combination with a dump mill which cools and shapes the product for next process. India today is looked upon as world largest producer and third largest consumer of natural rubber. Global Rubber consumption is forecasted to rise up to 4.3% annually. A majority of rubber demand is accounted for by the motor vehicle sector, particularly via usage in tyres.

Some of the fundamentals of the book are rubbers: materials and processing technology, rubbers from stereo regular polymerization of isoprene and butadiene, rubbers from stereo regular polymerization of isoprene and butadiene, mixing technology of rubber, rubber vulcanization, rubber compounding, manufacture of rubber products, silicone rubber, styrene butadiene rubber (SBR), nitrile and polyacrylic rubber, grinding and pulverization technology, recycling of rubbers, rubber/recycled rubber blends, concrete modified by recycled rubber, etc.

The production of rubber and rubber products is a large and diverse industry. The rubber product manufacturing industry is basically divided into two major sectors: tyre and non tyre. The tyre sector produces all types of automotive and nonautomotive tyres, whereas the non tyre sector produces high technology and sophisticated products like conveyor belts, rubber seals, etc. The wide range of rubber products manufactured by the rubber industry comprises all types of heavy duty earth moving tyres, auto tyres, tubes, automobile parts, footwear, beltings, etc. The rubber industry has been growing tremendously over the years. The future of the rubber industry is tied to the global economy. Rapidly growing automotive sector in developing economies and increased demand for high performance tyres are expected to contribute to the growth of the global industrial rubber market. The current scenario reveals that there is a tremendous scope for the development of rubber processing industries. The global market for industrial rubber products is projected to increase 5.8 % per year. Investment in rubber industry is expected to offer significant opportunities in the near future and realizing returns to investors willing to explore this sector. This book deals with all aspects of rubber processing: mixing, milling, extrusion, and molding; reclaiming and manufacturing process of rubber products. The major contents of the book are rubbers, materials and processing, mixing technology of rubber, techniques of vulcanization, rubber vulcanization, rubber compounding, rubber reclaiming, manufacture of rubber products, latex and foam rubber, silicone rubber, polybutadiene and polyisoprene, styrene butadiene rubber, natural rubber, etc. The book contains addresses of plant machinery suppliers with their photographs. It will be a standard reference book for professionals, entrepreneurs, those studying and researching in this important area, and others interested in the field of rubber processing technology.
