

A multinomial logistic regression analysis was conducted to examine the relationship between Brand Preference (Apple, Samsung, Other) and the predictor variables Age, Price, and Gender. The model was statistically significant, indicating that it was able to distinguish effectively between the brands based on the predictor variables $\chi^2(6) = 67.29, p < .001$. For Brand Preference of Apple compared to Other, Age and Price were significant predictors. Each year increase in Age was associated with a decrease in the likelihood of preferring Apple over Other ($B = -.20, p < .001, 95\% CI [.74, .91]$). Each unit increase in Price was associated with a slight increase in the likelihood of preferring Apple ($B = .013, p < .001, 95\% CI [1.00, 1.02]$). Gender was not a significant predictor in this comparison. In the comparison between Samsung and Other, both Age and Price were again significant predictors. Each year increase in Age was associated with a decrease in the likelihood of preferring Samsung ($B = -.13, p = .003, 95\% CI [.80, .96]$). Each unit increase in Price was associated with a slight increase in the likelihood of preferring Samsung ($B = .01, p = .001, 95\% CI [1.005, 1.017]$). Gender did not significantly predict preference for Samsung over Other.

Shows how to model a binary outcome variable from a linear regression analysis point of view

Develops the logistic regression model and describes its use in methods for modeling the relationship between a dichotomous outcome variable and a set of covariates

Following establishment of the model there is discussion of its interpretation

Several data sets are the source of the examples and the exercises and a number of software packages are used to analyze data sets including BMDP EGRET GLIM SAS and SYSTAT

Regression 2nd Edition **Logistic Regression Inside and Out** Jeffrey Strickland,2017-03-13 If you have a yes or no question then you can probably answer it with a logistic regression model Logistic regression is most appropriate when the dependent variable has two possible outcomes Will customers respond to an offer or unsubscribe will the enemy fight or flee will subjects respond to treatment or grow ill will livestock live or die Yes or no I am often asked if logistic regression is a machine learning algorithm I say that it is not for I can formulate it mathematically and solve it using matrix equations for example Its solution is derived deterministically and estimation is performed mathematically through optimization methods The logit link function is the mathematical expression a nonlinear exponential equation and we transform it to a linear equation by applying the natural logarithm Here we find mathematical modeling probability and statistics Here I will take you on a journey into the art and science of predictive modeling using logistic regression inside and out Theoretical Properties of Multinomial Logistic Regression Shelley Brenda Bull,1983 **Multiple Regression** Aki Roberts,John M. Roberts, Jr.,2020-12-16 Multiple Regression A Practical Introduction is a text for an advanced undergraduate or beginning graduate course in statistics for social science and related fields Also students preparing for more advanced courses can self study the text to refresh and solidify their statistical background Drawing on decades of teaching this material the authors present the ideas in an approachable and nontechnical manner with no expectation that readers have more than a standard introductory statistics course as background Multiple regression asks how a dependent variable is related to or predicted by a set of independent variables The book includes many interesting example analyses and interpretations along with exercises Each dataset used for the examples and exercises is small enough for readers to easily grasp the entire dataset and its analysis with respect to the specific statistical techniques covered A website for the book includes SPSS Stata SAS and R code and commands for each type of analysis or recoding of variables in the book Solutions to two of the end of chapter exercise types are also available for students to practice The instructor side of the site contains editable PowerPoint slides other solutions and a test bank **Logistic Regression** Fred C. Pampel,2020-09-09 This volume helps readers understand the intuitive logic behind logistic regression through nontechnical language and simple examples The Second Edition presents results from several statistical packages to help interpret the meaning of logistic regression coefficients presents more detail on variations in logistic regression for multicategory outcomes and describes some potential problems in interpreting logistic regression coefficients A companion website includes the three data sets and Stata SPSS and R commands needed to reproduce all the tables and figures in the book Finally the Appendix reviews the meaning of logarithms and helps readers understand the use of logarithms in logistic regression as well as in other types of models **A Dynamic Multinomial Logistic Regression Model for Online Classification** Rong Nie,2019 **Exploring spatial dynamics using logistic regression and a multinomial logit model** N H. Byrne,2015 For the problem of multi class linear classification and feature selection we propose new approximate message passing algorithms based on Hybrid Generalized Approximate Message Passing Hybrid GAMP to train a multinomial logistic regression model We propose both maximum a posteriori MAP and approximate minimum mean square error MMSE estimators of the weight vectors Then we design simplified variants of these algorithms that lead to significantly faster runtimes and improved numerical robustness Our algorithms are able to handle the case where the number of features far exceeds the number of training examples through the use of sparsity promoting prior distributions on the weight vectors Additionally our algorithms are able to take advantage of existing expectation maximization EM and Stein s Unbiased Risk Estimate SURE methods to tune their parameters online Finally we demonstrate our algorithms performance on both synthetic and real datasets
