Algomedia. The Image at the Time of Artificial Intelligence Pietro Conte, Anna Caterina Dalmasso, Maria Giulia Dondero, Andrea Pinotti, 2026-02-18 Contemporary media ecosystems are deeply entangled with algorithms which play an increasingly pervasive role in shaping our environment and mediating our perception of reality This book aims to provide a critical map of a rapidly evolving mediascape in which humans machines and data negotiate forms of agency cultural imaginaries and scopic regimes In particular the volume addresses the multiple challenges posed by algorithmic media within the domain of visual culture and identifies a paradigmatic shift in the age of artificial intelligence images are no longer merely captured or represented they are synthesized inferred and predicted by probabilistic models As active agents shaping creativity and meaning making AI systems carry far reaching epistemological aesthetic and political implications They open new possibilities for content accessibility and participatory engagement yet they also encode existing asymmetries Trained on massive datasets machine learning models often reproduce structural biases amplify cultural and social exclusions and perpetuate inequalities At the same time algorithmic systems are being subverted and reappropriated by artists and curators transforming them into sites of resistance and experimentation for imagining alternative futures Bringing together perspectives from computer science semiotics philosophy critical theory aesthetics art theory visual culture and film and media studies this book sets out an interdisciplinary exploration to make key concepts such as algorithm latent space neural networks generative models and NFTs accessible to a humanities audience while providing a set of critical tools to interrogate both the ruptures and continuities that define this ongoing transformation The contributions span a wide array of topics from machine vision and facial recognition to social robots from computational art analysis to generative AI distributed authorship and curatorial practices from biometric surveillance and predictive modeling to the politics of datasets and decolonial critique from virtual and augmented reality to posthuman imagery digital afterlives and AI mediated memory Compelling us to revisit foundational categories in media studies this book offers an analytical framework to open a debate that is not merely about technology s impact but about how algorithms have become the media themselves veritable

A Slow Approach to Visual Literacy in Higher Education Dana Statton Thompson, Stephanie Beene, 2025-04-10 The principles of slow librarianship which prioritizes reflection collaboration solidarity and valuing all kinds of contributions can also support deeper and more sustained learning and understanding This book emphasizes the importance of attention and focus to the process of visual literacy demonstrating how this approach supports ACRL s Visual Literacy Competency Standards for Higher Education and the Framework for Visual Literacy in Higher Education Library workers educators and instructors will discover dozens of flexible lesson plans for teaching visual literacy scaffolded by competency levels novice intermediate and advanced ways to integrate slow looking into the classroom emphasizing careful observation and the sustained act of looking techniques for showing learners how to select images with intention as well as

carefully determine when and how to share those images reasons why slow creating is essential to understanding and applying visual literacy in the twenty first century and a look at how increasing access to internet connectivity generative artificial intelligence AI and new ethics for sharing and using information online will affect the future of visual literacy

Guide to Computer Network Security Joseph Migga Kizza, 2024-01-19 This timely textbook presents a comprehensive guide to the core topics in computing and information security and assurance realms going beyond the security of networks to the ubiquitous mobile communications and online social networks that have become part of daily life In the context of growing human dependence on a digital ecosystem this book stresses the importance of security awareness whether in homes businesses or public spaces It also embraces the new and more agile and artificial intelligence boosted computing systems models online social networks and virtual platforms that are interweaving and fueling growth of an ecosystem of intelligent digital and associated social networks This fully updated edition features new material on new and developing artificial intelligence models across all computing security systems spheres blockchain technology and the metaverse leading toward security systems virtualizations Topics and features Explores the range of risks and vulnerabilities in all connected digital systems Presents exercises of varying levels of difficulty at the end of each chapter and concludes with a diverse selection of practical projects Describes the fundamentals of traditional computer network security and common threats to security Discusses the role and challenges of artificial intelligence in advancing the security of computing systems algorithms protocols and best practices Raises thought provoking questions regarding legislative legal social technical and ethical challenges such as the tension between privacy and security Offers supplementary material for students and instructors at an associated website including slides additional projects and syllabus suggestions This important textbook reference is an invaluable resource for students of computer science engineering and information management as well as for practitioners working in data and information intensive industries Professor Joseph Migga Kizza is a professor former Head of the Department of Computer Science and Engineering and a former Director of the UTC InfoSec Center at the University of Tennessee at Chattanooga USA He also authored the successful Springer textbooks *Ethical and Social Issues in the Information Age* and *Ethical and Secure Computing A Concise Module*

biologists oncologists and radiologists to discuss bone tumors and how bone cancer metastases affects each major organ system Offers insights to research clinicians oncologists and radiologists into understanding the molecular basis of bone cancer leading to more well informed diagnoses and treatment of tumors and metastases Offers insights to bone biologists into how clinical observations and practices can feed back into the research cycle and therefore can contribute to the development of more targeted genomic and proteomic assays

Cross-Modal Learning: Adaptivity, Prediction and Interaction Jianwei Zhang, Stefan Wermter, Fuchun Sun, Changshui Zhang, Andreas K. Engel, Brigitte Röder, Xiaolan Fu, Gui Xue, 2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience
