requires being numerate because numerical abilities are not only essential for life prospects of individuals but also for
economic interests of post industrial knowledge societies Thus numerical development is at the core of both individual as
well as societal interests There is the notion that we are already born with a very basic ability to deal with small numerosities
Yet this often called number sense seems to be very restricted approximate and driven by perceptual constraints During our
numerical development in formal e g school but also informal contexts e g family street we acquire culturally developed
abstract symbol systems to represent exact numerosities in particular number words and Arabic digits refining our numerical
capabilities In recent years numerical development has gained increasing research interest documented in a growing number
of behavioural neuro scientific educational cross cultural and neuropsychological studies addressing this issue Additionally
our understanding of how numerical competencies develop has also benefitted considerably from the advent of different
neuro imaging techniques allowing for an evaluation of developmental changes in the human brain In sum we are now
starting to put together a more and more coherent picture of how numerical competencies develop and how this development
is associated with neural changes as well In the end this knowledge might also lead to a better understanding of the reasons
for atypical numerical development which often has grievous consequences for those who suffer from developmental
dyscalculia or mathematics learning disabilities Therefore this Research Topic deals with all aspects of numerical
development findings from behavioural performance to underlying neural substrates from cross sectional to longitudinal
evaluations from healthy to clinical populations To this end we included empirical contributions using different experimental
methodologies but also theoretical contributions review articles or opinion papers Bulletin Michigan. Department of
